I. Overview

This asset management plan (the Plan) supports and promotes evidence-based decision making and the development of strategies to extend the lifecycle of assets while maintaining services and reducing risks. The Plan benefits the City of Peterborough (the City) by looking to the future and identifying the best places to invest limited dollars to provide the greatest benefit to residents, visitors, and businesses.

The Plan reviews the growth and demand that the City is expected to meet based on the City's approved Official Plan. Peterborough currently acts as a gateway to the cottage communities, a commuter area to and from the GTA and a young adult hub due to post-secondary institutions. These features are expected to draw more people to the City in the next 20 years. The expected growth has real implications on how the City will develop and maintain its asset base.

Asset management requires an understanding of what we own, what services we are going to deliver and how we are going to deliver it. To do this the Plan will review the current state of the infrastructure, the proposed levels of service (LoS) to be delivered, the strategies used to manage assets, an assessment of levels of risk, and the funding sources used to finance these strategies. This Plan is a living document and is intended to be monitored annually with full updates every five years. This Plan includes the following fifteen (15) service areas:

- Roads & Related assets
- Stormwater
- Wastewater
- Transit
- Solid Waste Management
- Community Housing
- Community Recreation
- Airport
- Urban Forest
- Social Services – Day Care
- Arts, Culture & Heritage
- Public Works
- Emergency Services – incl. Police and Fire Services
- Information Technology Services
- Administration

The management of water assets, including asset management planning activities were previously the responsibility of a separate Municipal Service Corporation, Peterborough Utilities Company. The transition of the delivery of water services from the Peterborough Utilities Company to be directly operated by the City of Peterborough is currently underway and reporting of potable water assets will be included in future iterations of the Plan once the transition has been fully established.

Incorporating green infrastructure assets, including natural assets, into asset management plans is relatively new for many municipalities. The City of Peterborough incorporates some enhanced

green infrastructure assets into the existing Plan (e.g., wet/dry stormwater ponds, street trees, park trees, parks and open spaces), however the co-benefits and services provided through an 'ecosystem' lens is not fully quantified and accounting practices for addressing natural assets are evolving. Staff are currently working on updating the green/natural asset inventory which will assist in defining processes and methodologies for identification of assets, ownership boundaries, service(s) provided, condition, valuation (replacement cost vs. restoration costs) and risk management.

II. Plan Purpose

The asset management plan provides a means of guiding investment decisions to meet key strategic and operational goals. It communicates how the City's assets will be managed to achieve established service levels and targets. The Plan sets the foundation for making informed decisions and prioritizing investments by using asset data and service level objectives as evidence.

The Plan also:

- Reports Council and stakeholder expectations related to asset management
- Provides as a reference for Council, Commissioners, Directors, Managers, and other City staff, the asset lifecycle activities currently in place to deliver services (operation, maintenance, rehabilitation, replacement, disposal, etc.) and the levels of service with current performance.
- Provides the planned approach to maintain assets in accordance with service level provisions, and the financial impacts to provide these services
- Allows the City to meet legislative asset management reporting requirements

The City will continue to apply asset management principles and develop a comprehensive asset management plan. This Plan will seek to prioritize investments over a 25-year period with major updates every five years.

III. Regulatory Asset Management Requirements

On December 27, 2017, under the *Infrastructure for Jobs and Prosperity Act, 2015*, the Province enacted Ontario Regulation 588/17, *Asset Management Planning for Municipal Infrastructure*. The regulation sets forth the following timelines:

Figure E1: Ontario Regulation 588/17 Requirements and Timeline

*Core assets are roads, bridges, stormwater and wastewater assets

The regulation also requires that every municipality's asset management plan be reviewed and approved by the municipal council.

In 2016, the City's Asset Management Policy and Procedure was approved by Council (Report USEC16-021) and complies with the regulation's requirements for the strategic asset management policy, as shown in Figure E1 above.

The intention of the regulation is not only to implement best practice asset management throughout the municipal sector but to also help municipalities better understand what services need to be supported over the long term. It focuses on levels of service and integrating lifecycle management, risk, and financial management to maximize the value on investments and return on ratepayers' dollars.

The 2025 AMP is an extension of the 2024 AMP with levels of service being updated to present proposed levels of service, replacing the current levels of service analysis and related lifecycle management strategies and financial strategies. This is in alignment with O.Reg 588/17 reporting requirements as shown in Figure E1 above.

IV. Elements of the Plan

The 2025 Asset Management Plan provides details about the City's infrastructure (as of year-end 2023/2024), estimated at a total replacement value of \$6.3 billion and contains the following sections:

- Executive Summary
- Introduction
- Levels of Service
- State of Infrastructure
- Asset Management Strategies
- Financial Summary
- Plan Improvement and Monitoring
- Conclusion

Individual Service Area Attachments 1 through to 15 are included as part of this Plan in Section 9.0 – Service Area Attachments. The attachments contain detailed information specific to the asset inventory, replacement costs, age, remaining useful life, condition ratings, current levels of service, asset management lifecycle strategies and risk strategies.

Attachments 1 through to 15 contain specific service area details for the following types of strategies:

- Non-infrastructure solutions
- Operations & Maintenance Activities
- Renewal/Rehabilitation
- Replacement
- Disposals/Abandonment
- Service Improvement Activities
- Growth Activities

City staff will continue to refine asset management strategies and associated costs to meet the new provincial asset management reporting requirements set forth in O. Reg 588/17.

The Plan's format aligns with the provincial "Building Together: Guide for Municipal Asset Management Plans". The Plan is also consistent with:

- Ontario Infrastructure for Jobs and Prosperity Act, 2015
- Development Charges Act, 1997 (Consolidated 2023)
- Requirements for the recording of Tangible Capital Assets (TCA)
- The City's TCA Accounting Policy (Policy 009)

V. Asset Management and Climate Change

The City applies several strategies to acquire, maintain, and improve assets in a sustainable and effective manner. This is important as municipalities face increasing challenges with managing aging public assets in the face of increasing uncertainty from risks, including those related to the impacts of climate change.

The City is committed to considering climate change when planning asset lifecycle activities (e.g., design, maintenance, renewal, replacement, etc.). and is an important criterion in the decision-making framework. Climate change is also taken into consideration when developing proposed budgets and forecasts, when assigning useful lives and current replacement costs of assets (for asset management planning purposes), and in the risk management plan.

VI. Levels of Service

Overview

Part of the City's core purpose is to provide services to stakeholders. Establishing levels of service (LoS) and tracking over a period of time is essential to measuring the success of service delivery and asset management strategies.

When establishing levels of service, the following are taken into consideration:

- Protecting and upholding public safety
- Protecting the environment
- Regulated/legislated requirements
- Stakeholder expectations
- Vulnerabilities and mitigation approaches to impacts of climate change
- Level of service information provided in approved plans and studies

Levels of service reflect how the City delivers services from the perspective of the service user (Stakeholder LoS) and from the perspective of service delivery (Technical LoS). This section of the Plan includes information on proposed levels of service (both Stakeholder and Technical), performance measures, and trends in service delivery.

In this iteration of the Plan, proposed levels of service will be reported with discussion on how they differ from the current levels of service as reported in the 2024 Plan (where applicable). The discussion also includes proposed levels of service appropriateness, achievability and affordability for the City. At a minimum, legislated/regulatory levels of service will be reported and tracked as part of the levels of service review.

Table E1 below summarizes each service area's proposed levels of service, estimated annual lifecycle activity costs (averaged over the projected 10 years), projected performance over the 10-year forecast and 25-year forecast, and long-term service/risk consequences.

Table E1: Proposed Level of Service Summary

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
Roads & Related Assets	Roads ROW and Traffic Management	\$32.2M	ROW asset conditions/LOS expected to remain neutral.	ROW asset conditions expected to decline without intervention. Large portion of local road assets not meeting LOS.	• ROW asset conditions expected to deteriorate to below acceptable standards over the long term • Financial burden is incurred due to the level of treatment required to maintain roads over the long-term. • Reduced accessibility within and in/out of City limits as road conditions deteriorate or possible closures • Reputation negatively affected
Roads & Related Assets	Municipal Structures	\$3.8M	Municipal Structure conditions/LOS anticipated to show a slight decline without additional funding to meet lifecycle cost needs.	Municipal Structure conditions expected to decline without increased budget. This is likely due to age of assets and approaching end of life.	• Financial burden incurred due to the level of treatment required for structures falling into lower BCI range • Reduced accessibility within and in/out of City limits due to possible bridge closure. • Reputation negatively affected
Roads & Related Assets	Active Transportation Network	\$4.2M	Active Transportation conditions/LOS are expected to remain neutral or improve. The level of funding is not sufficient to meet growth demands without intervention.	Conditions will remain neutral however there are risks to achieving growth related demands for additional sidewalks and trails without additional funding.	• Financial burden is incurred due to the level of treatment required to maintain sidewalks/trails over the long-term. • Not supporting development and growth by limited construction of pedestrian network in new areas
Stormwater	Conveyance & Management	\$11.9	Condition/LOS of stormwater assets are anticipated to remain neutral. Capacity/service improvements are	Conditions remain neutral but targets to accommodate watershed improvements and flood mitigations may be	• Flood risks with more extreme weather events • Environmental impacts • Reputation/image negatively affected • Increased financial burden for repairs/replacement of damaged assets due to flooding

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
			anticipated to be deferred due to limited funding	deferred.	
Wastewater	Conveyance & Treatment	\$14.3M	Conditions/LOS of treatment and conveyance assets are expected to remain neutral.	Conditions are expected to remain neutral. Growth projections include significant investments to achieve growth/service improvement LOS targets.	• Financial burden due to increased backlog of work • Not achieving growth projection targets • Experience sewer backups into private properties • Increased wastewater bypass occurrences • Not meeting environmental/legislative standards • Reputation negatively affected
Transit	Fleet, Facilities, Linear Assets & Miscellaneous	\$12.6M	Condition/LOS of Transit facilities expected to decline. Transit fleet (conventional buses) exceeding useful life with difficulties to procure sufficient replacements due to manufacturer delays.	Conditions anticipated to decline. Increased fleet service interruptions (due to aging assets and increased demand/not enough buses to meet demand).	• Not meeting service demands • Bus fleet maintenance costs expected to increase due to aging buses (not replaced at right time) • Service interruptions due to growth/additional routes and no buses assigned • Reputation negatively affected

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
Solid Waste Management	Fleet, Facilities	\$1.6M	Condition/LOS of Solid Waste Management assets expected to remain neutral.	Age/condition of fleet assets expected to decline without additional funding. Acquisition costs for garbage trucks are increasing.	- Financial burden to maintain aging garbage trucks and aging facilities - Interruptions to garbage and organic waste pick up due to delayed pick up/missed pick up days - Environmental non-compliance at landfill - Reputation negatively affected
Community Housing	Facilities	\$12.9M	Condition/LOS of Community Housing Facilities expected to decline.	Condition of Community Housing expected to decline. Growth targets/service improvements not achieved.	- Not achieving housing targets - Increased waiting list for housing - Financial burden to maintain aging housing facility stock - Further/accelerated asset deterioration - Reputation negatively affected
Recreation	Aquatics and equipment, arenas and recreation facilities, parks and park amenities, buildings	\$6.9M	Condition/LOS of assets expected to remain neutral.	LOS expected to remain neutral. Capital funding needs for park rejuvenation will increase due to new facilities and park amenity acquisition renewal needs over the long term.	- Closure of parks/park facilities - Closure of splash pads - Reduced hours of operation of arenas/recreation facilities - Financial burden to maintain aging park amenities and assets - Increased treatment costs - Reputation negatively affected
Peterborough Airport	Airside assets, groundside assets	\$3.9M	Condition/LOS of airside assets anticipated to be maintained, however, asphalt conditions will	Airside assets will require increased funding to maintain pavement conditions, i.e. runways, taxiways,	- Airside service interruptions - Financial burden is incurred due to the level of treatment required to maintain airside and groundside assets - Reputation negatively affected - Accelerated asset deterioration

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
			decline without sustained funding. Facility conditions expected to remain neutral. Significant investment required for water and sewer upgrades.	etc. Groundside assets will require additional funding as assets age and fall into the 'poor' condition category	
Urban Forest	Street trees, park and open space trees, equipment	\$1.7M	Urban forest LOS expected to remain neutral.	Urban forest tree canopy not increasing due to limited funds to plant sufficient trees.	- Declining tree canopy - Reputation negatively affected - Tree conditions are deteriorating, increased maintenance costs to maintain trees
Social Services – Daycare	Daycare Facility	\$0.1M	Expected to remain neutral.	Expected to remain neutral.	- Facility will remain in a state of good repair - Facility is at capacity and will need to review expansion options if required
Arts, Culture & Heritage	Library and Collections, Museum and Archives, Peterborough Art Gallery	\$3.3M	Condition/LOS of facilities expected to remain neutral	Facility Conditions anticipated to decline without increased funding.	- Increasing backlog of work - Increased treatment costs - Facility systems equipment failure causing damage to collections - Closures or reduced hours of operation - Reputation negatively affected
Information Technology Services	Hardware, software, equipment	\$1.7M	Conditions/LOS expected to remain neutral. Average lifecycle costs are not inclusive of all ITS projects. Some	Expected to remain neutral.	- As new equipment and systems are acquired, the planned maintenance budget will need to be increased to avoid service interruptions - Corporate support LOS will likely experience a decline without intervention (i.e. additional staff) to deliver required IT related projects

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
			costs are embedded in other service areas for their specific IT projects/support.		
Emergency Services	Fire Services	\$3.1M	Conditions/LOS expected to remain neutral.	As new assets are acquired, it is anticipated that over time, Fire Services will experience declining LOS without increased funding	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions
Emergency Services	Police Services	\$9.2M	Conditions/LOS expected to remain neutral.	New facility/expansion activities will affect long-term LOS and will be determined in future iteration of the Plan.	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions
Public Works	Facilities, Fleet, Equipment	\$1.6M	Conditions/LOS expected to remain neutral.	Service levels are anticipated to decline due to increasing costs for fleet acquisitions/replacements.	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions
Administration Facilities	Facilities	\$1.3M	Conditions/LOS expected to remain neutral.	LOS expected to decline without increased funding to address aging facility assets and accommodate for additional facilities/assets	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
				acquired.	

Detailed information about levels of service and can be found in Section 9.0 – Service Area Attachments of the Asset Management Plan.

VII. The State of the City's Infrastructure

The State of Infrastructure summarizes the quantity of assets in data inventories, provides a replacement cost valuation of the assets, and summarizes the overall condition of each asset or asset class.

This Plan seeks to answer the following questions of asset management pertaining to City infrastructure:

- What do we own?
- What is it worth?
- How old is it and what is the remaining useful life?
- What is its condition?
- What is the risk rating? (i.e., risk impact should the asset fail)

a) What do we own?

A consolidated list of assets included in the Plan can be found in Appendix A – Assets Included in the Plan.

b) What is it worth?

The 2025 Plan currently includes fifteen (15) service areas with an estimated asset replacement value of \$6.3 billion (2023 valuation). The highest valued service areas are Wastewater (\$1.86 billion), Stormwater (\$1.77 billion), and Roads & Related Assets (\$1.45 billion). Of the total estimated current replacement value of City assets (estimated \$6.3 billion), 80% (estimated \$5.1 billion) are classified as “core” assets (Wastewater, Stormwater and Roads & Related). Figure E2 and Table E2 below summarize the total asset replacement value by service area.

Figure E2: Asset Replacement Value by Service Area

**Replacement Value by Service Area:
Total: \$6.3 Billion**

Table E2: Total Asset Replacement Value by Service Area

Service Area	2023 Replacement Value (\$Millions)
Wastewater (core asset class)	\$1,863
Stormwater (core asset class)	\$1,767
Roads & Related Assets (core asset class)	\$1,447
Community Housing	\$326
Community Recreation	\$227
Urban Forest	\$169
Transit	\$115
Airport	\$92
Emergency Services	\$66
Arts, Culture & Heritage	\$65
Solid Waste Management	\$61
Administration	\$56
Public Works	\$45
Information Technology Services (ITS)	\$10
Social Services – Daycare	\$1
Total Asset Replacement Value*	\$6,310

*May not add due to rounding

c) **What is the Age and Remaining Useful Life?**

A requirement of asset management planning is to determine the remaining useful life of an asset based on generally accepted life spans for a given asset. It is important to note that the age profiles are strictly based on the calculated age of the assets unless otherwise noted. The original useful life span of a given asset can be extended through maintenance and betterments. This process can extend the asset's ability to deliver a service beyond its original life span.

Service area age and remaining useful life details can be found within the respective service area attachments in Section 9.0 of this Plan.

d) **What is the Condition?**

The state of the City's assets is a snapshot in time and uses a blend of age-based data and observed data. Based on the total asset replacement value, approximately 79% (\$5.0 billion) of the City's assets are considered to be in fair condition or better.

The City significantly invests in ongoing capital programs to maintain existing assets in acceptable condition and to deliver services at sustainable levels. Some of the capital programs planned over the 10-year forecast include a collector and local streets pavement preservation program with a total project cost estimated at \$50.6 million, an underground storm and sanitary pipe CCTV inspection program with an estimated total project cost of \$21.1 million, a fleet and equipment replacement program with a total cost estimated at \$22.9 million

and a sidewalk reconstruction program with an estimated total project cost of \$5.9 million. Without these ongoing investments, it would be expected that levels of service would notably start to decline over the long-term, exposure to risk would increase along with increased asset treatment costs.

Figure E3 below shows the distributed condition ratings and total replacement values of City owned assets included in this 2024 Plan.

Where assets may be rated poor or very poor (approximately \$1.3 billion or 21% of the City's total asset replacement value), the City ensures that these assets will not represent a hazard or pose a health and safety risk. Generally, these are assets that may not be performing as intended. For example, a road segment considered to be in very poor condition would typically require significant resurfacing treatment or asphalt replacement. This does not mean the road is 'unsafe' for use, it means the road is not providing the same level of service and ride quality as a road rated in fair condition would provide.

Figure E3: Overall Distributed Asset Conditions and Replacement Value

As noted above, an estimated 21% of assets with a replacement value of \$1.3 billion are in poor to very poor condition. To maintain established service levels and achieve performance targets, significant investments within the next decade will be needed to avoid further deterioration and/or possible service disruptions.

It is also important to understand that without applying the right treatment at the right time, options typically become more costly. Where lower cost treatments, such as road resurfacing, would significantly improve road surface conditions, not applying this treatment soon enough would result in requiring full asphalt replacement, and at a higher cost. Lifecycle activities, including treatment options, are further discussed within individual service area attachments.

e) **What is the Risk Rating?**

The City has used a risk rating methodology to assign a risk score to each asset included in the asset management plan. The risk ratings are composed of two factors: asset condition and consequence of failure. The asset condition informs the likelihood that an asset will fail, and the consequence of failure informs the impact resulting from the failure. In addition to the asset condition, other asset information, such as size and material, was considered when assigning a risk score where possible. The consequence of failure of an asset is assessed on a 5-point scale that evaluates the impacts on the environment, society, finances, and reputation. It is important to understand that high-risk assets are those with high

consequence of failure **and** high likelihood of failure (where likelihood is based on asset condition).

The value of high-risk assets in this Plan is an estimated \$1.2 billion (19% of total City asset replacement value).

Of the \$1.2 billion, an estimated asset replacement value of \$795 million are rated poor and very poor, with \$489 million (62% of total asset value in poor and very poor condition) being Roads and Related, Stormwater, and Wastewater assets.

Figure E4 below shows the overall distribution of high-risk assets by condition and replacement value.

Figure E4: Distributed Condition and Replacement Value of High-Risk Assets

High-risk assets that are most critical to service delivery should be prioritized. Where asset conditions continue to deteriorate, the risks to service delivery increases. With adequate investment levels, risk exposure is minimized, and the probability of service interruptions are lowered.

Currently, the Roads & Related Assets, Wastewater, and Stormwater service areas comprise of the largest portion (by replacement value) of high-risk assets in poor or worse condition. The City seeks to prioritize high-risk asset investment needs whenever feasible.

VIII. Future Demand and Emerging Challenges

There are several factors, challenges and trends that influence demand. Also known as demand drivers, these can significantly impact services delivered by the City of Peterborough. Some examples of demand drivers include (but are not limited to):

- Changing population
- Changing demographics
- Stakeholder service priorities
- Aging assets
- Climate Change
- Legislation/Regulation
- Changing technologies
- Land use planning

Understanding the drivers and challenges that impact levels of service is a key step in forecasting and managing demand. Demand drivers may change the City's requirements for acquisition, operation, maintenance, renewal, or disposal of assets. Demand drivers impact the type of *services* that are delivered, which directly impacts the type of *assets* needed to deliver these services. The City reviews demand drivers through various strategic planning studies, development charges studies, etc. and considers options on how demand drivers will be affordably managed.

Some options (other than the acquisition/construction of new assets) that may be considered to manage demand include (but are not limited to):

- Sharing of services with other local boards, agencies and municipalities
- User fees/pricing
- Service hours of operation
- Restrictions of use (e.g., seasonal use of bridges or roads)
- Incentives for services (e.g., on/off peak times service charges for parking)
- Awareness/education to efficiently and effectively use services the City provides (e.g., plans that inform on stormwater management, energy reduction strategies, GHG reduction strategies)
- Provision of alternative services (e.g., encouragement of using public transit or other methods identified in transportation demand management studies)

It is also important to understand demand drivers and the potential risks they may pose, e.g., climate change. Effects of climate change pose significant risks to both assets and the services they provide and will need to be managed and monitored by the City regularly. High level risks and associated impacts to the City's ability to effectively deliver services are discussed within the individual Service Area Attachments. The City is working towards developing an Integrated Infrastructure Risk Management Plan in which the identification and management strategies of demand drivers and associated risks are better understood and documented.

IX. Financial Summary

Asset funding is often a complex process drawing from several revenue sources. The funding for the City's programs strives to maximize the use of external funding to limit the burden on taxpayers and ratepayers. However, ageing assets and population demographic changes will create a need to replace and expand the current asset base and requires adequate funding.

a) What is the Financial Shortfall?

The financial shortfall represents the unavailable funding for lifecycle activities required to achieve established targets for levels of service. Where a shortfall is identified, management strategies to balance service levels, costs and risks will be considered by staff and Council and incorporated into future plans when possible.

The *projected annual funding* – is represented by the historical 3-year average from the City's capital budget. With the assumption that there will not be any significant impacts to revenue sources, this will be used as a baseline to calculate the financial shortfall. The average projected available funds to undertake asset lifecycle activities is an estimated **\$119 million** per year over the next 10 years.

In this Plan, the proposed LOS *annual forecasted needs* are the estimated annual lifecycle activity costs for all service areas reported in this Plan. These are based on a 10-year planning period and considers lifecycle investments required to meet growth demands and achieve proposed levels of service. The average projected lifecycle costs to deliver Proposed LOS over the next 10 years is **\$145 million per year**.

Additionally, *annual infrastructure backlog needs* are the estimated annual lifecycle activity costs for all service areas reported in this Plan. These are based on a 10-year planning period and considers lifecycle investments required to meet growth demands and achieve 100% established levels of service. The average projected lifecycle costs to achieve 100% LOS over the next 10 years is **\$251 million per year**.

The emphasis of the asset management plan is to communicate the consequences and risks that the shortfall may have on the services provided so that decision making is informed

This Plan presents two financial shortfalls; the shortfall to achieve proposed levels of service and the shortfall to achieve 100% levels of service (eliminate the backlog). Results of the financial shortfall scenarios are discussed below.

Proposed LOS Financial Shortfall Summary

Figure E5 below presents the projected funding and proposed LOS costs over the next 10 years.

The estimated average financial shortfall to deliver Proposed LOS over the next 10 years is **\$26.2 million per year**. This indicates that 82% of the forecasted lifecycle costs needed to provide the proposed services reported in this Plan at the lowest lifecycle cost are accommodated in the projected budget.

Figure E5: Proposed LOS Financial Shortfall

Average Annual Lifecycle Costs Proposed LOS* 2024-2033	Projected Average Funding	Average Financial Shortfall
\$145 million	\$119 million	(\$26 million)

*Value represents annual needs averaged over the projected 10-year planning period

Funding Gap to Deliver Proposed LOS Total Needs: \$182M

Backlog Analysis – Annual Backlog Needs

Figure E6 below presents the projected funding and costs to achieve 100% LOS over the next 10 years.

The estimated average financial shortfall over the next 10 years to eliminate the backlog needs and undertake lifecycle activities to deliver proposed LOS is **\$151 million per year**. This indicates that 44% of the forecasted lifecycle costs needed to provide the proposed services reported in this Plan at the lowest lifecycle cost are accommodated in the projected budget.

Figure E6: Infrastructure Backlog Financial Shortfall Analysis

Assets not maintained at proposed LOS are likely to experience a reduction in service levels over the 10-year period. They may potentially experience more frequent asset failures or disruption to services, as well as increased levels of maintenance to keep assets in service.

Several possibilities exist to begin minimizing the gap between needs versus projected funding. To overcome this financial challenge, the City must review asset needs comprehensively in view of the services they deliver on an annual basis, or during the budget deliberation process. As unplanned revenues become available, the City will seek to apply them towards mitigating shortfalls whenever possible. The assets included in this Plan have a large impact on delivering the services that Stakeholders expect, and at reasonable costs (taxes, fees etc.). As further information becomes available and is refined, these financial projections will be improved.

The City is currently implementing a variety of strategies to effectively address the increasing capital investment needs and the financial shortfall. Some of the key strategies include:

1. A Debt Management Policy and Capital Financing Plan to assist in financing capital works as presented in report CPFS12-011 Debt Management and Capital Financing Plan, (April 4, 2012) and amended through Report CLSFS23-033 (August 14, 2023)
2. Implementation of the City's approved Asset Management Policy and Procedure and Asset Management Plan which together provide guidance for capital budget planning through asset management principles
3. Review levels of service for all service areas. Council approved metrics that measure the expected performance of delivering levels of service will influence prioritization of investments during the budget deliberation process.
4. Expand on the use of the existing multi-criteria analysis technique for prioritizing capital projects for all service areas. The analysis technique is intended to consider a range of qualitative and quantitative criteria and reflect the social, cultural, economic, and environmental characteristics of a project's purpose. This process provides transparency to critical/high priority investments and will support planning capital investments with the greatest cost benefit while balancing an acceptable level of risk.
5. Analyze and weigh the benefits of maximizing existing revenue sources vs. the provision of service levels. The City's ability to afford the proposed service levels will need to be examined in more detail to ensure sustainability or, if necessary, a reduction in service levels is the more achievable option to avoid increases to user fees or increased property taxes.

X. Managing the Risks

Some of the overarching service area risks associated with the City's ability to implement the asset management plan and deliver established service levels include:

- Insufficient funding levels
- Insufficient staffing and resources to implement lifecycle strategies
- Asset deterioration assessments/models are underestimated/miscalculated
- External/environmental factors such as climate change effects (more severe weather

- instances, increased demands due to growth)
- Acquisition of new assets

Impacts associated with above risks include:

- Further/accelerated asset deterioration
- Increased backlog of work
- Service interruptions due to poor asset conditions
- Increased treatment costs
- Changes to the level/degree of required asset treatment, requiring increased resources/costs (i.e., maintenance now needing replacement)
- Planned budget/needs forecast not reflective of actual asset needs
- Additional assets/expansion of services required
- Reputation/image negatively affected

Staff are working on developing a more detailed risk register in which risk identification, risk impacts, risk treatment plan and costs, and residual risk ratings will be documented in the asset management plan.

XI. Next Steps

1. The City is collaboratively working towards refining its asset management practices as well as aligning them with the ISO 55000 series of standards. Additionally, the City will work towards ensuring reporting requirements set forth in regulation O. Reg 588/17 *Asset Management Planning for Municipal Infrastructure* are satisfied by the stipulated timelines.
2. Complete standardized condition assessments of assets currently without inspected condition and regularly update existing assessments.
3. Develop comprehensive LoS Policy and Procedure.
4. Develop Asset Risk Management Policy and Procedures, which will improve probability assumptions used to determine risk ratings and implement consequence rating system procedures that are data driven

5. Enhance considerations of Climate Change and Sustainability risks
6. Improve the Optimized Decision-Making process including a policy and procedure.
7. Use the Plan to drive capital investment priorities.
8. Monitor progress of strategies and recommendations from AMP.

1.0 Introduction

The services the City of Peterborough delivers depends on effectively managed assets. The effective management of these assets has a significant impact on the ability for the City to deliver services.

Incorporating an 'asset management lens' into the decision-making process involves the understanding of levels of service, cost of service, and risk, as depicted in Figure 1-0.

Managing the assets requires activities such as planning, purchasing, construction, maintenance, rehabilitation, and disposal. In order to continue to deliver the services stakeholders and businesses depend on day-to-day. The City must make the right investments at the right time in the right assets.

Figure 1-0: Asset Management Lens and Decision-Making

1.1 City of Peterborough Goals

The Official Plan states that 'Peterborough is a prosperous community, distinctive in its natural beauty, cultural heritage and strong sense of community. As a leader in environmental sustainability, growth in Peterborough uses infrastructure and land efficiently, promotes healthy lifestyles and incorporates green initiatives. The City will continue to develop as a complete, resilient and connected community that provides a high quality of life, supports a strong and diverse economy and promotes a unique, vibrant sense of place. Peterborough is equitable and accessible for all residents and visitors and celebrates its engaged, inclusive and diverse community'.¹ The City's Official Plan further details the City's goals for growth and outlines the steps needed to meet them.

The Strategic Plan² states that the Peterborough 2050 vision as 'build a future-ready City with a forward-looking, contemporary community, thriving in creativity and a modern economy. The Peterborough of tomorrow will be bold, innovative, progressive, caring, vibrant, inclusive, prosperous, and sustainable, a place that respects its past, heritage, culture, and readily embraces its future with excitement and renewed vigor. Leading today for tomorrow will ensure our City's fair share of respect and economic growth, locally as well as globally.' The Strategic Plan further details the four (4) strategic priority pillars:

- Growth & Economic Development

¹ City of Peterborough, City of Peterborough Official Plan, (Adopted April 2023),

² City of Peterborough Strategic Plan 2023-2050, (Approved April 2023)

- Infrastructure
- Community & Wellbeing
- Governance & Fiscal Sustainability

These pillars lay the foundation for the development of business and work plans for City departments as well as act as guiding beacons to achieve the Peterborough 2050 vision. This asset management plan is intended to support these visions, goals and objectives of both the Official Plan and Strategic Plan.

1.2 Relationship with Other Corporate Planning Documents

The Plan considers the goals of several planning documents including the Official Plan and the City of Peterborough Strategic Plan, as well as other various master plans. Information gathered from these documents are included in the assessments and prioritization of asset investments and when defining level of service measures and targets.

Additionally, the Plan contains information that integrates with the budgeting process. The City presents the current year committed funding for both the operating and capital budget. A projected four-year, nine-year, and 24-year forecast is proposed for capital and 'other' capital projects only. The Plan is intended to influence budgets through various asset management strategies and processes such as, but not limited to, evaluating against defined levels of service measures and targets, risk assessment, alignment with climate change adaptation/mitigation strategies, etc.

1.3 The Plan Scope

For a list of service areas and assets included in the 2024 asset management plan, see Section 8.0 – Appendices, Appendix A – Assets Included in the Plan

Refer to Section 9.0 of this Plan for the complete service area analysis that discuss the following:

- Asset inventory
- Replacement cost
- Asset condition and remaining useful life
- Risk analysis
- Levels of service
- Asset management strategies and associated risks

The asset management plan excludes assets owned by other organizations that are funded by the City; however, all organizations are encouraged to align with the Plan's strategies where feasible.

The Plan is based on SOI data as of December 31, 2023 and LOS data as of 2024, and uses a lifecycle model to forecast and assess renewal needs and review other investment needs over a 10 year planning period. The long- term planning period used is intended to align with master plans and Development Charge Study forecasts and to inform the sustainability of the City's assets and services.

1.4 Council Presentation and Approval

To maintain visibility, transparency and accountability, the Plan including the state of infrastructure report will be reviewed and updated regularly and reported to council for approval following the final phase implementation of O.Reg. 588/17 in 2025. A full re-evaluation of the Plan is anticipated to be completed every five years. If during this timeframe, significant changes occur that will impact the asset management plan, an interim review may be undertaken. A proposed timeline for the Plan and related documents is shown in the table below.

Table 1-0: Asset Management Related Documents and Updates

Document	Frequency of Update
Asset Management Policy and Procedure	Reviewed every five years as required
Asset Management Plan	Annual review with full re-evaluation every 5 years
State of Infrastructure Report	Annual review with full re-evaluation every 5 years
Capital and Operating Budget	Annually

1.5 Developing the Plan

The Council approved Asset Management Policy and Procedure outlines how a constant and reliable asset management plan and effective budget will be delivered. The asset management workflow (Figure 1-1), which includes the asset management plan, is delivered with employee involvement as shown in (Figure 1-2) below.

Figure 1-1: Asset Management Workflow

Figure 1-2: Employee Involvement in Workflow Stages

This Plan is developed by utilizing best available information until full implementation of the workflow shown above is applied. The City is working towards fully implementing the asset management workflow to effectively deliver the asset management plan as well as deliver services in a sustainable and transparent manner. Steps to achieve this are detailed in Section 7.0 – Plan Improvement & Monitoring.

1.6 Assumptions and Limitations of the Plan

Key assumptions or limitations made in developing this Plan are documented below. Most assumptions were noted as comments or footnotes throughout the document to show areas where improvements are most required for future iterations of the Plan.

With further developments in the City's asset management program such as policies, procedures, full integration of all asset and data collection templates many of these assumptions will be minimized or eliminated in the future.

Table 1-1: Assumptions and Limitations of the Plan

Assumption	Level of Confidence	Data Used	Comment
Assets 'useful life/remaining useful life' used as proxy for condition when actual condition rating unavailable	Low	Useful life/remaining useful life of assets are based on Public Sector Accounting Board (PSAB) 3150 Asset Register or based on recommendations of subject matter expert.	Misrepresents actual condition and does not account for maintenance activities that extend useful life of the asset
Remaining service life reflects actual conditions	Intermediate	Expected useful life from PSAB 3150 asset register is used to calculate remaining useful life. Current age is based on install date, not 'observed age' for most assets. Updated BCA's use observed age for facility assets.	Unless otherwise stated in the Plan, or when recommended by City staff, the age of the assets used are calculated and not based on 'observed age', unless an updated BCA is completed for a facility.
Consequence of Failure scores are accurate	Intermediate	Manually applied consequence score for many assets.	Provides a very conservative consequence estimate
Fleet condition is in better condition than useful life data	High	Useful Life from TCA register	Fleet maintenance program greater than recommended preventative maintenance program by Original Equipment Manufacturer (OEM)
Information technology equipment/asset condition ratings are accurate	Low	Condition ratings have been assigned using age/service life as proxy in funding model. This is due to not having a	Information Technology Service (ITS) Area reports condition of assets based on age which resulted in significant

Assumption	Level of Confidence	Data Used	Comment
		formalized condition assessment methodology implemented. IT assets are in better condition than calculated age-condition rating.	value of assets in poor/very poor. ITS staff provided high level recommendations on actual condition of assets for consideration which provide more accurate condition (good).
Guardrail condition data from 2009 remains accurate. Visual assessments only to update replacements	Low	Visual images used to update 2009 assessment.	Accurate for capturing replacements since 2009 only.
Trails inspections and roads inspections are similar in nature	High	Condition assessment program is managed through the <i>Paver</i> pavement management software system.	Pavement management software system is robust and captures defects that apply for trails.
Sidewalk state of infrastructure data related to condition rating is accurate	Low	Currently using number of defects/length of sidewalk as a proxy to determine condition.	Need to review options for assigning condition scores for concrete sidewalks. Current methodology reports sidewalks being in better condition than they actually are.
Treatment equipment was not inspected in Wastewater treatment building inspections	Intermediate	Historical MP2 database and Megamation Databases.	If treatment equipment is part of the database, it is in large rolled up groups that cannot be broken down for reporting in this report. MP2 database has all assets separated.
Wastewater treatment asset inventory updated to year end 2023	Intermediate	SOI data from previously approved AM Plan (2021) has been updated to reflect actual inventory and condition.	Treatment data is in the process of being fully re-evaluated in detail and will be included in future iterations of the Plan.

Assumption	Level of Confidence	Data Used	Comment
Assets with unknown installation dates built at same time as nearby assets	Intermediate	City age polygon from GIS	Generally accurate for engineered assets but not very accurate for 'green' assets
Asset register is complete and at useful level of granularity	Low	Data used to develop asset register is based on best available information and may use pooled assets to ensure the scope of assets in each service area are captured	Pooled assets are not at the level of granularity best for lifecycle analysis and forecasting costs. Pooled assets may inflate annual renewal needs as the whole replacement cost is reported in one given year.
Risk analysis on a 5-point scale for likelihood and consequence provides enough granularity for assessment	Intermediate	Matrix provided in Section 2.0 State of Infrastructure	May overestimate risk due to a basic consequence matrix being used to assign risk scores. Risk bands in the matrix provide broad measures to compare against.
Customer values understood from previous engagement activities	Intermediate	Workshops with service area management team	Not all service areas have had recent public engagement to understand desired service levels.
Renewal needs are based on current (performance) condition of assets.	Intermediate	Most recent condition assessment data and/or age and useful life as a proxy for condition	Condition data may not be up-to date or accurate, particularly for assets that used age as a proxy for condition. Underestimates needs for most service areas.
Camera and other equipment for CCTV inspection fleet not included in fleet cost	Low	PSAB 3150 Asset Register	Investigation into equipment for CCTV required. Currently not accounted for in the Plan
Annual financial shortfall includes the complete cost of implementing all asset	Low	Renewal activities and associated costs have had in-depth review however other	New budgeting/accounting hierarchy structure is required to do

Assumption	Level of Confidence	Data Used	Comment
management strategies		lifecycle activities and associated costs use existing approved capital budget as baseline.	accurate 1:1 comparison of lifecycle activities and related costs. Hierarchy structures are being investigated to track these costs.
Investment needs/lifecycle costs are aligned with budget forecast	Low	Data to calculate investment needs/lifecycle costs are based preliminary 10 year budget forecast not approved by Council	The investment needs are based on planned projects proposed in the capital budget. The current year is only approved and deferred projects are tentatively placed in the subsequent year or within the forecast until the next budget review takes place.
Anticipated level of funding in 10-year forecast is accurate	Low	Three-year historical average of previously approved capital budget used as anticipated level of funding for financial strategy section	Currently, capital budgets are only approved for the current year and does not have committed funds to proposed projects beyond current year.

1.7 Continuing Evaluation and Improvement

Asset management practices are constantly evolving and improving. An effective Plan will note the areas that can be improved and the steps that will be taken to make improvements.

These areas may be where data used was not strong objective data or required assumptions. Improvements will also include the identification of any data gaps and a plan to fill those gaps.

Beyond raw data improvements, LoS measures will be limited to the primary service provided by the asset. A plan to identify more comprehensive service measures is in development. While developing these service measures the current service level will be our current target.

There is a need to improve the alignment of financial planning and asset management planning. A corporate asset management communication plan is proposed to be developed in which asset management plans, policies and procedures that define how we will align such activities can effectively be communicated to internal and external stakeholders.

2.0 State of Infrastructure

2.1 Overview

The development of the state of infrastructure (SOI) includes not only an assessment of physical condition, but also the capacity where available. The SOI considers the risk of asset failure by considering the likelihood an asset will fail and the consequence of that failure.

The SOI seeks to review services rather than assets. This means that the report often assesses assets that are owned and managed by different departments to provide a single service. This Plan contains the analysis of the following service areas:

1. Roads & Related Assets
2. Stormwater
3. Wastewater
4. Transit
5. Solid Waste Management
6. Community Housing
7. Community Recreation
8. Airport
9. Urban Forest
10. Social Services - Daycare
11. Arts, Culture & Heritage³
12. Information Technology Services (ITS)
13. Emergency Services (Police and Fire Services)
14. Public Works
15. Administration

2.2 Condition Ratings and Weighted Methodology

A standardized 5-point rating scale has been utilized to assign scores to assets. The following table shows the rating scale range and letter grading system used for assigning condition scores, including using an age-based rating methodology.

Table 2-0: 5 Point Scale for Rating Asset Condition

Condition Rating (Likelihood)	Score	Percent Life Consumed	Grade
Very Good	5	10%	A
Good	4	50%	B
Fair	3	80%	C

³ Heritage is currently within the City's Planning Department but included as part of the ACH Service Area Attachment for grouping of assets with similar services.

Condition Rating (Likelihood)	Score	Percent Life Consumed	Grade
Poor	2	100%	D
Very Poor	1	>100%	F

Facility Condition Index

The Facility Condition Index (FCI) is a standard facility management benchmark that is used to assess the current and/or projected needs of a facility. It is defined as the ratio of the required renewal costs to current replacement value of the facility. The calculated ratio is compared to an FCI scale as follows:

0%-5% = Good
5%-10% = Fair
10%-20% = Poor
Greater than 20% = Very Poor

The City calculates FCI's based on the three-year projected needs rather than using only the current year needs. This ensures that the overall facility rating is not based on a single high dollar capital project needed in the current year and takes into consideration mid-term needs for a better reflection of the state the facility is in. For this AMP, FCI's are used as a performance measure for Levels of Service for each relevant service area with facility assets. Unless otherwise stated in the Plan, facilities with complete and up-to-date condition assessments will use observed age of the inspected building element at the time of assessment as a proxy for condition ratings.

Weighted Average Methodology

A weighted average methodology using replacement costs of assets has been used to compare varying asset types more easily (e.g. a linear asset to a non-linear asset). By applying this methodology, the overall service area condition rating is influenced more by assets with the greater cost, as these represent a greater liability to the City should they not be performing as intended or are nearing failure.

2.3 Trend Scoring System

Trends have been assessed where SOI have been previously documented. The following table shows the system used for assessing trends.

Table 2-1: Trend Scoring System

Trend	Symbol	Meaning
Improving		Condition grade improvement from previous grades.
Neutral		Condition grade remained the same from previous grades.

Declining		Condition grade degraded from previous grades.
N/A	N/A	Condition grade has not been assessed more than once.

The trend development compares the condition grade from previous assessments to the current assessment. This process is a raw comparison. It does not consider changes to data collection process or improvements of data quality. It does consider new assets, updated inspections and expansion of a service.

2.4 Risk Analysis

Every asset has a risk of failure. To measure risk the likelihood of asset failure must be considered against the consequence of failure. The table shown below (also in Appendix B) provides a guideline by which the asset consequence of failure score was assigned:

Table 2-2: Consequence of Failure Scoring System

Consequence	Description	Score
Minimal	No noticeable damage to environment and/or society, no injuries, not a nuisance, no time delays, little to no known fines, no media attention	5
	Minor amount of damage to environment or society, less than a few or very minor injuries, easy work around, limited delays, small fines, no media attention	4
Moderate	Some damage to environment or society, a few injuries or minor injuries, work around available, some delay, subject to fines or investigation, possible media attention	3
	Damage to environment or society, several injuries (varying degrees), work arounds are not easy to implement, large delays, large fines and investigation, local media attention	2
Catastrophic	Major damage to environment/society, life threatening injuries or death, work arounds are not possible or time consuming and costly, major delays, legal action, large fines, major investigations, national media attention	1

Using the product of the likelihood of asset failure score and the consequence of failure score, the asset is placed within a risk category using the ranges shown in the chart below:

Category	Range
High Risk	< 5
Medium Risk	5 – 20
Low Risk	> 20

By evaluating risk, the City of Peterborough can develop a deeper understanding of the state of the infrastructure along with impacts of failures. The City continues to refine risk management strategies and implement a more consistent risk-based approach. The City owns an estimated \$1.0 billion worth of high-risk assets.

2.5 Asset Valuations

As a part of Public Sector Accounting Board (PSAB) 3150, all departments were required to develop an asset register. This register required basic asset information such as the historical purchase or construction costs. Since historical record keeping varied on the level of details, many assumptions were required.

The current replacement costs (where current construction costs are not available) are evaluated by escalating the historical cost based on inflation. The actual replacement costs of assets in this Plan include soft costs and assumes that the replacement considers current technologies and enhancements available today.

2.6 Age and Useful Life

PSAB 3150 accounting requires the City to report the age of the assets and the expected useful life of assets. The expected useful life for the PSAB 3150 relates to the period of time that the City will apply depreciation to the assets. This also helps the City to build reserves for asset replacement over the life of an asset.

In practice, assets often are well beyond their accounting useful life. Improvements in maintenance and operational practices have also contributed to extending the useful life of the City's assets

For older assets where acquisition (e.g. donation, constructed, purchased) data is not available, the age of the asset was assumed to be at the time of the historical growth patterns of the City. Sub-asset classes were assumed to be purchased at the time of initial construction of the asset class.

The useful life of assets is assumed using engineering best practices and the current institutional knowledge of the time. These values are not regularly updated and are applied to all assets of a similar type.

Assuming condition using useful life often shows asset conditions in worse condition than the formal condition assessments. Over time the City will improve condition inspection programs to include additional service areas.

2.7 Overview of the Corporate SOI

The current SOI for the services covered in this plan is summarized in Table 2-3 and shown by service area in Table 2-4. Detailed state of infrastructure information for each service area can be found in Section 9.0- Service Area Attachments.

Table 2-3: SOI Overview

City of Peterborough State of Infrastructure Summary		
Valuation	Average Condition (by Replacement \$)	Trend
\$6.3 Billion	Good (B)	

Table 2-4: Service Area Condition and Replacement Value⁴

Service Area	Overall Condition	Replacement Value (\$M)
Wastewater	Good (B)	\$1,863
Stormwater	Good (B)	\$1,767
Roads & Related Assets	Fair (C)	\$1,447
Community Housing	Fair (C)	\$326
Community Recreation	Fair (C)	\$227
Urban Forest	Fair (C)	\$169
Transit	Fair (C)	\$115
Airport	Good (B)	\$92
Emergency Services	Fair (C)	\$66
Arts, Culture & Heritage	Good (B)	\$65
Solid Waste Management	Good (B)	\$60
Administration	Fair (C)	\$56
Public Works	Good (B)	\$45
Information Technology Services (ITS)	Good (B)	\$10
Social Services – Daycare	Very Good (A)	\$1.0
Total Replacement Value*		\$6,310

*May not add due to rounding

2.8 Condition Assessments

Over the years, the City's condition inspection program has been growing to capture more of the core assets such as facilities, pipes, manholes, etc. and continues to capture regulated or legislated assets such as wastewater treatment assets and sidewalks. These inspection programs have formal standards based on engineering best practices and regularly scheduled updates. Where visual condition assessments have not been completed, the age of the asset has been used to assume the physical condition of the asset.

⁴ Total replacement values may not add up due to rounding

2.9 Limitations of the SOI

The City is currently working towards improving fixed asset reporting through the upgrade of the Enterprise Resource Management software. The City is also pursuing the development of a formal data governance policy and procedure to create clear lines of communication around data ownership, collection and maintenance practices.

The asset management group has reviewed the current state of asset management and is working through a plan to improve all asset management practices at the City. These programs and projects will all contribute to the improvement of the development of the asset management plan and state of infrastructure data.

3.0 Levels of Service (LoS)

3.1 Overview

The City's levels of service review depict City services delivered from the perspective of the service user (Stakeholder LoS) and from the perspective of service delivery (Technical LoS). The measures included in this Plan are fluid and may be revised in future iterations of the Plan where applicable. In 2019, the City acquired a community engagement platform where internal and external stakeholders are able to provide input on municipal topics, such as performance on level of service delivery. Additionally, in 2024, an online survey was launched to gather feedback from stakeholders on City services and the satisfaction of current services being delivered. The feedback from the survey is key to successful asset management as it ensures the needs of stakeholders are considered in a low-risk and cost-efficient manner.

For the purpose of this report, each service area will have a service objective statement that describes the service offered by the City, a stakeholder value/service attribute and at least one technical and one stakeholder level of service for each of the major service areas. Technical measures relate to the City's delivery of a service while stakeholder level of service measures show the service from the perspective of citizens and businesses.

The Levels of Service reported in each service area attachment are the levels of service the City proposes to provide for each year over the 10-year planning period.

3.2 Trends in Current Service Delivery

Levels of service objectives are typically supported by one or more key performance indicators or measures that help quantify the services being delivered. The table below summarizes the overall trends as of year-end 2024. The table describes how the City is performing against defined targets and provides a brief description of any shortcomings in performance relative to service objectives and/or targets. Full details are found in the service area attachments.

Table 3-0: Current Service Area Levels of Service Trends

Service Area	Asset Class	Performance Target Achieved	Comments
Roads & Related Assets	Roads-ROW	✗	- Currently, 21% of local roads are in poor or better condition (target of minimum 50%) - Currently 84% of streetlight inventory has had low energy retrofit (target of 100%)
	Municipal Structures	✓	Stakeholder and Technical LoS performance measures are currently being met
	Active Transportation Network – Sidewalks	✓	Stakeholder and Technical LoS performance measures are currently being met
	Active Transportation Network – Trails	✗	Currently only 84% of the population is 400m from a trail (target of 90%)
Stormwater	Management	✗	- Currently 17% of properties are resilient to 100-yr storm, where buildings are not impacted by flooding (target of 21%) - Currently 94% of conveyance assets are in poor or better condition (target of 100%) and 81% of SWM assets are in poor or better condition (target of 100%)
	Conveyance		
Wastewater	Treatment	✗	Currently 86% of treatment assets are in fair or better condition (target of 100%)
	Conveyance	✗	- Currently 97% of conveyance assets are in poor or better condition (target of 100%). - Quantities of serviced parcels have been increasing, however not at target of 100%. - Current ratio of 182 connection days: 26,067 serviced parcels or 0.007. Target of zero connection days: current parcels serviced).

Service Area	Asset Class	Target Achieved	Comments
Transit	Fleet	✗	- Fleet: 14% of vehicles past their useful life (target of max. 10%) - Facilities: 2 out of 3 facilities with an overall condition rating of 'Fair' (target of 3 facilities)
	Facilities		
Solid Waste	Fleet	✗	Fleet: unassigned ratio of vehicles not meeting target (currently, out of service garbage trucks that are still safe for use are being repurposed for seasonal green waste pick up)
	Facilities		
Community Housing	Facilities	✗	- Currently 1,924 households are seeking placement (target of less than 1000) - Facilities: 84% of all community housing facilities with Facility Condition Index of 10% (poor) or better (target 100%)
Recreation ¹	Arenas and Rec. Facilities	✗	- Facility: provision of 1 ice surface to 16,730 population (target of 1 ice surface to 11,000 population) - Facility: provision of 1 indoor pool to 83,651 population (target of 1 indoor pool to 25,000 population) - Fleet: 52% of fleet current replacement value in poor or better condition (target of 100%)

¹ Recreation facilities, arenas and parks LOS analysis does not include Miskin Law Community Complex and other parks due to timing of Plan development preceding facility/park capitalization. Future iterations of the Plan will account for excluded parks, arenas and recreation facility and services.

Service Area	Asset Class	Target Achieved	Comments
	Parks	✗	• Average ratio of neighborhood parts to current population is 0.76ha/1,000 (target of 1ha/1,000 population). • Average ratio of outdoor pool facilities to current population is 1:83,631 (target of 1:25:000 population) • Average ratio of splash pads/wading pools is 1:9,295 (target of 1:7,500 population) • 43 neighborhood parks not meeting minimum design standards (target of all parks meeting min. design standards) • 70% of parks amenity assets in poor or better condition (target of 100%)
Airport	Facilities	✗	• Annual energy use intensity is 1.23 GJ/m2 (target of 0.86 GJ/m2 or less)
Urban Forest	Trees	✗	• 958 service requests processed and reviewed (target of minimum 2,700) • 94% of tree inventory is in poor or better condition (target of 100%)
Social Services - Daycare	Facility	✓	• Stakeholder and Technical LoS performance measures are currently being met
Arts, Culture & Heritage Facilities	Libraries	✗	• 0.3 gross square feet/capita (target of 0.8 – 1.25 gross square feet/capita. Not including Miskin Law Complex in this Plan)
	Museum & Heritage	✗	• Annual energy use intensity of 0.83 GJ/m2 (target of 0.41 GJ/m2 or less)
	Art Gallery	✗	• Ratio of galleries to current population is 1 facility : 83,651 population (target of 1 facility : 45,000 population) • Annual energy use intensity is 1.34 GJ/m2 (target of 0.41 GJ/m2 or less).

Service Area	Asset Class	Target Achieved	Comments
Information Technology Services (TS)	Equipment	✓	Stakeholder and Technical LoS performance measures are currently being met.
Emergency Services	Fire Services	✗	- Facilities: Fire suppression incidents are within NFPA response travel time – Target of 90% - Fire Station 1: 76% - Fire Station 2: 67% - Fire Station 3: 67% - Facilities: Annual energy use intensity is 1.10 GJ/m2 (target of 0.66 GJ/m2 or less)
	Police Services		- Facilities: Facility parking needs are not being met for staff and service vehicles - Facilities: Annual energy use intensity is 1.05GJ/m2 (target of 0.66 GJ/m2 or less)
Public Works	Fleet, Facilities	✗	- Fleet: 36% of vehicles past their useful life (target of max 10%) 20% of machinery and equipment past their useful life (target of max. 10%) - Facilities: Annual energy use intensity is 2.39GJ/m2 (target of 0.86 GJ/m2 or less)
Administration	Facilities	✗	- Parking needs of staff at City Hall and Provincial Court House are not being met - Annual energy use intensity of 210 Wolfe St is 1.23 GJ/m2 (target of 0.87 GJ/m2)

3.3 Proposed Levels of Service and Performance

In this iteration of the Plan, the proposed levels of service and associated costs to deliver services over the next 10 years are presented. For core assets, current reported qualitative descriptions and technical metrics are in accordance with those set forth in O. Reg 588/17 *Asset Management Planning for Municipal Infrastructure*. In the future, targets will be set and measured using a formal procedure. Levels of service analysis for each service area can be found in detail in Section 9.0 of this Plan.

3.3.1 Stakeholder Engagement and Proposed Levels of Service

The City recently participated in a public consultation exercise where a level of service satisfaction survey was launched to receive input on services being delivered and to better understand City service priorities. The survey was conducted using text message to web as well as being accessible via the City's ConnectPTBO website. The survey was conducted from Tuesday December 17th, 2024, to Tuesday January 14th, 2025.

The survey was structured to assess stakeholder satisfaction with current assets and service performance, identify service areas where improvements were desired, and evaluate the community's willingness to pay for adjustments to service levels.

3.3.2 Survey Results

A total of 298 responses were received with respondents being 18 years of age or older and living in Peterborough. While this represents only a small fraction of the City's total population, it provides valuable insights into community priorities and service expectations. This was the first asset management specific engagement for the City.

Questions related to the following service areas were included in the survey:

1. Roads and Related
2. Stormwater
3. Wastewater
4. Transit
5. Solid Waste Management
6. Recreation – parks, arenas/facilities, park amenities
7. Community Housing/Daycare
8. Arts, Culture & Heritage
9. Urban Forest
10. Police Services
11. Fire Services

Below is a summary of survey answers, highlighting the top 3 service areas for each question. The questions were based on scope, satisfaction and willingness to pay/prevent service decline:

Service Satisfaction:

1. Solid Waste – 81.0% of respondents using the service are satisfied and/or neutral with the service
2. Wastewater – 73.5% of respondents using the service are satisfied and/or neutral with the service
3. Stormwater – 67.8% of respondents using the service are satisfied and/or neutral with the service

Willingness to Pay to Prevent Service Decline:

1. Wastewater – 43.5% of respondents are willing to pay more to prevent this service from declining
2. Solid Waste – 42.2% of respondents are willing to pay more to prevent this service from declining
3. Stormwater – 36.6% of respondents are willing to pay more to prevent service from declining

Not Willing to Invest More to Improve/Prevent Decline:

1. Transit – 64.5% of respondents are not willing to pay more to improve or prevent decline of this service
2. Arts & Culture – 62.2% of respondents are not willing to pay more to improve or prevent decline of the service
3. Urban Forest – 60% of respondents are not willing to pay more to improve or prevent decline of the service

Services Valued Most:

1. Fire Services – 84% of respondents are not willing to allow this service to decline to improve another or save money
2. Roads and Related Assets – 80% of respondents are not willing to allow this service to decline to improve another or save money
3. Solid Waste Management – 79.7% of respondents are not willing to allow this service to decline to improve another or save money

The full survey results and report is attached as Appendix D of this report.

3.4 Proposed Levels of Service Summary

Proposed levels of service were examined in collaboration with service area subject matter experts through a series of multiple workshops. Service levels and costs to deliver services were analyzed based on the following factors:

- Appropriateness
- Affordability
- Sustainability

Table 3.1 below summarizes each service area's proposed levels of service, estimated annual lifecycle activity costs (averaged over the projected 10 years), projected performance over the 10-year forecast and 25-year forecast, and long-term service/risk consequences.

Table 3.1: Proposed Level of Service Review Summary

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level 2025-2034	Projected Performance based on Projected Funding Level 2035-2050	Long-Term Service/Risk Consequence at Projected Funding Level
Roads & Related Assets	Roads ROW and Traffic Management	\$32.2M	ROW asset conditions/LOS expected to remain neutral.	ROW asset conditions expected to decline without intervention. Large portion of local road assets not meeting LOS.	• ROW asset conditions expected to deteriorate to below acceptable standards over the long term • Financial burden is incurred due to the level of treatment required to maintain roads over the long-term. • Reduced accessibility within and in/out of City limits as road conditions deteriorate or possible closures • Reputation negatively affected
Roads & Related Assets	Municipal Structures	\$3.8M	Municipal Structure conditions/LOS anticipated to show a slight decline without additional funding to meet lifecycle cost needs.	Municipal Structure conditions expected to decline without increased budget. This is likely due to age of assets and approaching end of life.	• Financial burden incurred due to the level of treatment required for structures falling into lower BCI range • Reduced accessibility within and in/out of City limits due to possible bridge closure. • Reputation negatively affected
Roads & Related Assets	Active Transportation Network	\$4.2M	Active Transportation conditions/LOS are expected to remain neutral or improve. The level of funding is not sufficient to meet growth demands without intervention.	Conditions will remain neutral however there are risks to achieving growth related demands for additional sidewalks and trails without additional funding.	• Financial burden is incurred due to the level of treatment required to maintain sidewalks/trails over the long-term. • Not supporting development and growth by limited construction of pedestrian network in new areas
Stormwater	Conveyance & Management	\$11.9	Condition/LOS of stormwater assets are anticipated to remain neutral. Capacity/service	Conditions remain neutral but targets to accommodate watershed improvements and flood	• Flood risks with more extreme weather events • Environmental impacts • Reputation/image negatively affected • Increased financial burden for repairs/replacement of damaged assets due to flooding

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
			improvements are anticipated to be deferred due to limited funding.	mitigations may be deferred.	
Wastewater	Conveyance & Treatment	\$14.3M	Conditions/LOS of treatment and conveyance assets are expected to remain neutral.	Conditions are expected to remain neutral. Growth projections include significant investments to achieve growth/service improvement LOS targets.	• Financial burden due to increased backlog of work • Not achieving growth projection targets • Experience sewer backups into private properties • Increased wastewater bypass occurrences • Not meeting environmental/legislative standards • Reputation negatively affected
Transit	Fleet, Facilities, Linear Assets & Miscellaneous	\$12.6M	Condition/LOS of Transit facilities expected to decline. Transit fleet (conventional buses) exceeding useful life with difficulties to procure sufficient replacements due to manufacturer delays.	Conditions anticipated to decline. Increased fleet service interruptions (due to aging assets and increased demand/not enough buses to meet demand).	• Not meeting service demands • Bus fleet maintenance costs expected to increase due to aging buses (not replaced at right time) • Service interruptions due to growth/additional routes and no buses assigned • Reputation negatively affected

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
Solid Waste Management	Fleet, Facilities	\$1.6M	Condition/LOS of Solid Waste Management assets expected to remain neutral.	Age/condition of fleet assets expected to decline without additional funding. Acquisition costs for garbage trucks are increasing.	• Financial burden to maintain aging garbage trucks and aging facilities • Interruptions to garbage and organic waste pick up due to delayed pick up/missed pick up days • Environmental non-compliance at landfill • Reputation negatively affected
Community Housing	Facilities	\$12.9M	Condition/LOS of Community Housing Facilities expected to decline.	Condition of Community Housing expected to decline. Growth targets/service improvements not achieved.	• Not achieving housing targets • Increased waiting list for housing • Financial burden to maintain aging housing facility stock • Further/accelerated asset deterioration • Reputation negatively affected
Recreation	Aquatics and equipment, arenas and recreation facilities, parks and park amenities, buildings	\$6.9M	Condition/LOS of assets expected to remain neutral.	LOS expected to remain neutral. Capital funding needs for park rejuvenation will increase due to new facilities and park amenity acquisition renewal needs over the long term.	• Closure of parks/park facilities • Closure of splash pads • Reduced hours of operation of arenas/recreation facilities • Financial burden to maintain aging park amenities and assets • Increased treatment costs • Reputation negatively affected
Peterborough Airport	Airside assets, groundside	\$3.9M	Condition/LOS of airside assets	Airside assets will require increased	• Airside service interruptions • Financial burden is incurred due to the level of treatment

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
	assets		anticipated to be maintained, however, asphalt conditions will decline without sustained funding. Facility conditions expected to remain neutral. Significant investment required for water and sewer upgrades.	funding to maintain pavement conditions, i.e. runways, taxiways, etc. Groundside assets will require additional funding as assets age and fall into the 'poor' condition category	required to maintain airside and groundside assets • Reputation negatively affected • Accelerated asset deterioration
Urban Forest	Street trees, park and open space trees, equipment	\$1.7M	Urban forest LOS expected to remain neutral.	Urban forest tree canopy not increasing due to limited funds to plant sufficient trees.	• Declining tree canopy • Reputation negatively affected • Tree conditions are deteriorating, increased maintenance costs to maintain trees
Social Services – Daycare	Daycare Facility	\$0.1M	Expected to remain neutral.	Expected to remain neutral.	• Facility will remain in a state of good repair • Facility is at capacity and will need to review expansion options if required
Arts, Culture & Heritage	Library and Collections, Museum and Archives, Peterborough Art Gallery	\$3.3M	Condition/LOS of facilities expected to remain neutral	Facility Conditions anticipated to decline without increased funding.	• Increasing backlog of work • Increased treatment costs • Facility systems equipment failure causing damage to collections • Closures or reduced hours of operation • Reputation negatively affected
Information Technology	Hardware, software,	\$1.7M	Conditions/LOS expected to remain	Expected to remain neutral.	• As new equipment and systems are acquired, the planned maintenance budget will need to be increased to avoid

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
Services	equipment		neutral. Average lifecycle costs are not inclusive of all ITS projects. Some costs are embedded in other service areas for their specific IT projects/support.		service interruptions Corporate support LOS will likely experience a decline without intervention (i.e. additional staff) to deliver required IT related projects
Emergency Services	Fire Services	\$3.1M	Conditions/LOS expected to remain neutral.	As new assets are acquired, it is anticipated that over time, Fire Services will experience declining LOS without increased funding	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions
Emergency Services	Police Services	\$9.2M	Conditions/LOS expected to remain neutral.	New facility/expansion activities will affect long-term LOS and will be determined in future iteration of the Plan.	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions
Public Works	Facilities, Fleet, Equipment	\$1.6M	Conditions/LOS expected to remain neutral.	Service levels are anticipated to decline due to increasing costs for fleet acquisitions/replacements.	- Accelerated asset deterioration, increased backlog of work - Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment - Reputation/image negatively affected - Service interruptions

Service Area	Asset Class	Average Annual Lifecycle Costs for Proposed LOS	Projected Performance based on Projected Funding Level	Projected Performance based on Projected Funding Level	Long-Term Service/Risk Consequence at Projected Funding Level
			2025-2034	2035-2050	
Administration Facilities	Facilities	\$1.3M	Conditions/LOS expected to remain neutral.	LOS expected to decline without increased funding to address aging facility assets and accommodate for additional facilities/assets acquired.	• Accelerated asset deterioration, increased backlog of work • Financial burden is incurred due to the level of treatment required to maintain facility, fleet and equipment • Reputation/image negatively affected • Service interruptions

4.0 Asset Management Strategy

4.1 Overview

The City of Peterborough has adopted several strategies to maintain and deliver LoS; however, some of these strategies have been developed in an ad-hoc fashion based on expert knowledge of the area and what works in the context of the City. These have not been formally documented. The strategies involve a wide range of corporate involvement across several departments to coordinate staff and funding.

An Optimized Decision-Making strategy has been initiated but will be developed as a part of the City's Asset Management Road Map previously approved by council. This strategy will formalize how investments are made to maintain services and optimize spending while reducing risks across the corporation.

4.2 Asset Lifecycle Strategies

Asset lifecycle strategies seek to optimize the life cycle of assets to improve service and minimize risk at an appropriate level of investment. The strategy includes several processes that are dependent on life cycle stage, condition, ability to meet service targets and available operational and capital budgets. Strategies seek to combine projects where feasible to share resources and reduce the instances of negatively impacting other assets or services and lower overall cost of ownership.

The strategy for each service area will consider:

- Non-infrastructure Solutions
- Maintenance Activities
- Rehabilitation/Renewal Activities
- Replacement Programs
- Disposal/Abandoning Policies
- Service Expansion Programs
- Future Strategies in development/investigation

This section will also discuss the potential risks should the strategy fail to meet or improve conditions or service targets. Service area asset management strategy details and associated risks can be found in Section 9.0 of this Plan.

4.3 Procurement Methodologies

The City's Procurement By-law outlines the different types of procurement processes, including co-operative purchasing, that may be used for the acquisition and disposal of goods and services such as request for proposals, request for tenders, request for formal quotations, pre-qualifications, etc. The purpose of the By-law is to ensure the following:

- To ensure openness, accountability and transparency while protecting the best financial interests of the City of Peterborough.
- To maximize savings for taxpayers.
- To ensure service and product delivery, quality, efficiency and effectiveness.
- To encourage competitive bidding for the acquisition and disposal of goods and services where practicable.
- To ensure fairness among bidders.
- To encourage the procurement of goods and services with due regard to the preservation of the natural environment; to this end, a Supplier may be selected to supply goods made by methods that are environmentally friendly and sustainable and where practicable, incorporating recycled materials; and
- To provide City staff, which have purchasing responsibilities, clear direction on the policy to be followed.

4.4 Asset Management Strategies and Climate Change

Commitment to Climate Change

Climate change impacts all community and corporate sectors, with each containing varying levels of unique vulnerabilities and exposure to climate risks. Developing asset management strategies for high at-risk assets is necessary to reduce the risk of incurring potential catastrophic losses to build and natural infrastructure. Introducing mitigation and adaptation policies within corporate assets can significantly reduce greenhouse gas (GHG) emissions and improve asset resiliency against climate risks. Integrating mitigation and adaptation strategies simultaneously reduces the impact of future risks from climate change and contributes to the efficient management of asset lifecycles. This can be achieved by developing holistic plans targeting assets and asset management approaches that are both adaptive and mitigative, which accelerates achieving both interrelated climate change goals, as seen in Figure 4-1.

Figure 4-0: Mitigation and Adaptation Strategies

The City officially embarked on taking action against climate change in December 2016, when City Council approved Report CSD16-031, thereby adopting a Climate Change Action Plan (CCAP) for the community and corporate sectors. The CCAP established an initial GHG emissions reduction target of 30% below the 2011 baseline by 2031. Following the Federation of Canadian Municipalities' Partners for Climate Protection framework, the CCAP sets a course to reduce local contributions to climate change and prepare municipalities for present and expected changes due to our shifting climate. The corporate CCAP identifies nine strategies with 45 specific actions addressing how buildings, water and sewage infrastructure, solid waste, streetlighting, and the fleet will achieve the 30% target.

In September 2019, the City of Peterborough declared a climate emergency and upgraded the emission target to 45% GHG reduction by 2030 and net-zero by 2050. To support the modified GHG emission goal, the declaration affirmed the adoption of using a climate change lens to verify all corporate actions and policies to enable reaching the revised target. Furthermore, additional climate actions are slated to be developed to facilitate the accelerated timelines and emission goals.

4.4.1 Climate Change & Asset Management Integrated Policies

The City of Peterborough has striven to entrench climate change considerations into corporate operations and asset planning. Adaptation approaches are being incorporated concurrently within multiple bodies of work to address climate risk within community and corporate assets and strategizing plans to lower additional risks, as evident in the following documents:

- Official Plan 2021-2051,
- Community Climate Change Resiliency Strategy; and
- Watershed Planning Study.

Moreover, to lessen the inherent vulnerabilities of community and corporate assets from climate disruptions caused by unmitigated global GHG emissions are supported through corporate mitigation policies and plans. These bodies of works advance GHG emissions reductions from assets and contribute to lowering corporate assets being sources of emissions. The following are key documents that target GHG reductions from community and corporate assets:

- Official Plan 2021-2051,
- Corporate Energy Management Plan 2019-2023; and
- Climate Change Action Plan.

Official Plan 2021-2051

The new Official Plan (OP) provides direction and guidelines for the community to 2051 and has been embedded with many adaptation and mitigation policies throughout the plan. Multiple sections in the OP include direct and indirect adaptation and mitigation objectives to support mainstreaming climate action. Furthermore, climate change is addressed explicitly in section 5.7 of the OP with the vision:

“In the face of a changing climate, the City recognizes the need to adopt climate change mitigation and adaption measures to enhance the resiliency of its built and natural environments. The intent of this Plan is to support energy efficiency, improved air quality, reduced greenhouse gas emissions and climate change adaption through sustainable land use patterns and the integration of green infrastructure.” – 5.7.a, OP (2021)

The OP encourages a multisectoral approach to improving community and corporate resiliency and mitigation outcomes through the following strategies:

- Active travel and transit focused neighborhoods,
- Promoting zero and low carbon-built forms,
- Expanding the utilization of renewable and alternative energy systems,
- Sustainable land-use planning and implementing low-impact developments,
- Increasing the role of green infrastructure for mitigation and adaptation,
- Protect and enhance natural heritage features, especially assets that have hydrological or ecological functions,
- Incorporating adaptation plans for all capital planning projects; and

- Monitoring GHG emissions and strategizing reduction.

Community Climate Change Resiliency Strategy

In 2020, the Community Climate Change Resiliency Strategy (CCCRS) was finalized that identified local vulnerabilities and risks associated with the changing local climate. The CCCRS is intended to be a guiding document to be further refined and integrated within corporate operations and capital programs. The strategy seeks to reduce climate vulnerabilities by addressing the following adaptation themes:

- Reducing flood risk and protecting water quality and quantity from changing climate and extreme weather,
- Reducing damage and/or disruptions to infrastructure due to extreme weather and improving the safety of travel on roads and sidewalks,
- Protecting and enhancing natural heritage, tree canopy, natural vegetation, and wildlife from extreme weather and climate-related risks; and
- Integrating climate change into municipal decision-making processes that inform the way Peterborough is planned, developed, used, restored and maintained.

The CCCRS dovetails with asset management planning by recognizing that asset lifecycle activities can be directly impacted by extreme weather conditions fuelled by the changing climate. Asset management planning can utilize the adaptation themes of the CCCRS to inform how planning, acquisitions, maintenance schedules, asset renewals, and monitoring schedules can be implemented to support new and existing asset lifecycles.

Watershed Planning Study

The Watershed Planning Study is intended to characterize the urban watershed to inform how the impacts of extreme weather will affect the built and natural infrastructure in Peterborough. Modelling the watershed will reveal how varying climate extremes will impact assets and levels of services. The study has five overarching goals to protect, support, and enhance the watershed within the city boundaries are as follows:

- Minimize flood risks to infrastructure,
- Support natural channel morphology and protect against erosion and sedimentation,
- Prevent eutrophication and algae growth,
- Protect drinking water supply; and
- Protect, restore, and enhance the integrity of the watershed ecosystem through an integrated approach of natural areas, habitats, and connected links.

The Watershed Planning Study will guide land-use and water management practices, natural infrastructure restoration targets, and best practices for water quality and quantity to inform asset management planning for at-risk assets in the city.

Corporate Energy Management Plan 2019-2023

In 2014, the City adopted the Corporate Energy Management Plan (CEMP) mandated by the Province of Ontario through Ontario Regulation 507/18. The CEMP objectives were to encourage energy efficiency and staff awareness combined with establishing a target of 5% energy intensity (ekWh/ft²) reduction below the 2013 baseline by 2018 for all non-wastewater treatment facilities. The original plan was superseded with a revised CEMP containing new energy reduction goals and targeted a 10% energy intensity reduction below 2018 levels. The objectives of the updated CEMP are as follows:

- Introduce climate lens reporting to review all new corporate project's impact on GHG emissions,
- Develop energy training for staff to support energy usage reduction goals,
- Undertake a multi-division facility GHG reduction pathway study to understand the budgetary and technological requirements needed to achieve significant emission savings before 2050. This study is intended to explore some of the following topics:
 - Strategies to lower natural gas consumption for heating and domestic hot water heaters to reduce GHG emissions,
 - Solar photovoltaic and solar thermal opportunity mapping to support the introduction of zero-carbon energy sources,
 - Examine corporate phantom electricity loads and plan for decreasing usage; and
 - Investigate alternatives to traditional lighting to reduce electricity demand during daytime operating hours at facilities.

The CEMP is a leading document to support facility management planning to improve building energy efficiency and reduce associated energy GHG emissions. The CEMP also seeks to protect the City against the rising fuel cost attributed to the federal carbon tax that will increase throughout this decade. Asset management strategies can further boost the CEMP goals by targeting equipment renewals for high efficiency and by adopting low or no carbon energy systems during lifecycle activity updates instead of replacing like-for-like equipment.

Climate Change Action Plan

In 2016, the corporate Climate Change Action Plan (CCAP) was adopted that targeted a 30% reduction in GHG emissions by 2031. The CCAP developed a multiple sector strategy to realize its mitigation goal with the following actions:

- Institutionalize energy efficiency and low-carbon thinking into the corporation,
- Enhance operational efficiency of existing buildings,
- Build municipal facilities to ensure high environmental performance,
- Improve the environmental performance of existing municipal facilities,
- Utilize renewable energy sources,

- Transition the municipal fleet to be more efficient and less carbon-emitting,
- Enhance operation efficiency of the water services system,
- Improve the energy efficiency of the streetlighting system; and
- Reduce the amount of organic waste generated through municipal operations.

Incorporating asset management strategies within the CCAP actions can improve many outcomes, such as implementing lifecycle equipment renewals that target energy efficiency and low or no carbon energy systems.

The CCAP has subsequently produced results that have lowered energy consumption and GHG emissions from corporate assets. These achievements are as follows:

- Conversion of all streetlights to LEDs has reduced energy consumption by 52% and GHG emissions by 49 tCO₂e,
- In 2016, a solar photovoltaic array was installed onto the rooftop of Kinsmen Arena that generates 530,000 kWh of electricity per year and supplies 45% of the building's power annually,
- Added synchronized traffic lights and conversion to smart signal lights to improve traffic flow to reduce vehicle emissions,
- Increased tree planting to expand the urban canopy to support adaptation and mitigation efforts,
- Replaced ice resurfacers with electrically powered equipment,
- Added biogas digester at the landfill to capture anaerobic organic methane leaking from the landfill to lower GHG emissions and generate renewable energy,
- Upgraded nine facilities interior lighting systems with LEDs,
- Implemented lighting motion sensors to reduce electricity usage,
- Replaced community centre pool pumps with variable frequency drive to lower energy use; and
- Expanded waste diversion efforts at the landfill to collect reclaimable items and divert hazardous material away from the landfill.

The CCAP has also initiated the following corporate projects that are in the development phase that will reduce energy and GHG emissions:

- Planned conversion of decorative streetlights to LEDs,
- Development of Source Separated Organics/curbside green bin collection,
- Construction of a net-zero emission fire station,
- Planned installation of electric vehicle charging stations at facilities; and
- Planned purchase of light-duty electric vehicles.

4.4.2 Climate Risk Analysis

The Federation of Canadian Municipalities (FCM) four-step climate asset management framework is utilized to support integrating strategic decision-making to understand

corporate risks and impacts to levels of service from climate change. The framework enables a municipality to identify how climate change will impact its ability to provide municipal services and whether plans are in place to ameliorate losses to services or assets. The framework assesses a municipality's corporate climate readiness on the spectrum of identification, assessment, prioritization, and management. The FCM developed separate frameworks for risk management (Table 4-1) and level of service (Table 4-2) to distinguish between corporate service groups' climate readiness. The City will continue to utilize the frameworks below to assess its current state and seek to improve in identified areas.

Climate Risk Management Assessment

The framework for climate risk management contributes to understanding the state of vulnerability of City services and assets from climate change hazards and identifying planned or implemented strategies to improve resiliency (Table 4-0). Determining the level of risk to services and assets will support decision-makers to prioritize additional investments to reduce climate at-risk corporate service areas.

Table 4-0. FCM Climate Change Asset Management Risk Management Assessment Framework

Identification	Assessment	Prioritization	Management
Confirming the existing services the municipality provides, gathering regional and local climate change data, and identifying potential climate change hazards.	Determining the areas where the community is the most vulnerable due to climate change, looking specifically at how this could compromise a municipality's ability to provide services.	Exploring potential strategies to mitigate or adapt to climate change risks.	Incorporating climate change strategies in infrastructure plans, programs and budgets, and monitoring progress over time.
Question			
Identification	Have all assets been identified to deliver the service?		
	Have the latest local climate projections been utilized to determine future impact?		
	Have the implication of climate risks to asset been understood?		
	Has the identification of most likely asset climate hazards been recognized?		
Assessment	Has an asset risk assessment (consequence vs likelihood) been completed?		
	Are controls in place to reduce risks from climate hazards?		

Question	
	Has the impact of climate change on standards that inform future infrastructure design been understood?
Prioritization	Has a management plan limiting impacts of climate risks to assets been developed?
	Has a proactive strategy to overcome climate risk impacts been created?
	Has a preferred strategy for addressing the highest asset risks been selected?
Management	Has an asset management climate strategy been completed and activated?
	Has an evaluation of asset strategies in relation to its climate risk been completed?

Levels of Service Assessment

Evaluating the level of service impacts from climate change follows a similar stepwise pathway as climate risk management. This assessment seeks to understand if service groups' capacity and municipal asset conditions can withstand climate stressors, in addition to describing if strategies and implementation plans are in place to lower potential disruptions to service (Table 4-1).

Table 4-1. FCM Climate Change Asset Management Level of Service Assessment Framework

Identification	Assessment	Prioritization	Management
Documenting existing services provided to your community and identify the built or natural assets that enable service delivery.	Identifying the level at which your municipality currently provide services and commitments that are expected to meet; exploring current and future gaps in your ability to provide services; and assessing how the municipality's ability to provide services may be compromised because of climate change.	Exploring strategies to address current and potential future gaps in levels of service as a result of climate change.	Incorporating climate change strategies in infrastructure plans, programs and budgets, and monitoring progress.
Question			
Identification	Are existing levels of services provided to the community understood?		
	Have built and natural assets required to deliver the service been identified?		
Assessment	Has the impact of climate change affecting service been determined?		
	Have the implications to maintaining the current performance service level in relation to climate hazards been undertaken?		
	Have the most climate vulnerable areas of service been identified?		
Prioritization	Have strategies to address current and future gaps in the level of services from climate impacts been created?		
	Has a preferred strategy for tackling the largest gap in service been completed?		
Management	Have climate risk management strategies been completed and activated?		
	Has an evaluation of strategies in relation to its climate risk been completed?		

4.4.3 Strategic Facilities Planning

The Corporate Facilities and Energy Manager uses a Long-Term Strategic Facilities Planning Tool to assess the condition and the life expectancy of the Municipality's current facilities. Supported by energy audits and asset management, the tool provides for a comprehensive and detailed overview of all electrical, mechanical and facility components by life expectancy. This tool helps to populate the annual budget and work plan for energy management and facilities planning. Furthermore, the City is seeking funding to develop a greenhouse gas emissions reductions study for municipal facilities to include the impacts of climate change in future facility planning.

4.5 Investment Priorities

Capital forecasting and the prioritization thereof play a key role to the City's annual budget process particularly with the financial shortfall challenge. Projects proposed in the capital budget are subject to an internal prioritization process using a two-tiered review. Individuals involved in the initial review process include Department Commissioners and Financial Services staff. The second review is completed by the CAO, Commissioner of Finance & Corporate Support Services, the budget team, and individual Department Commissioners. After this second review process, the budget is finalized and presented to Council for approval.

It is important to note that the review process is extremely fluid, however investment priorities follow the direction set in the approved annual budget guideline and are also focused towards projects that:

- Are legislated requirements for services and infrastructure,
- Maintain service levels that are expected by Council, the community, and the asset management plan,
- Are identified as part of the service area's lifecycle management strategies, and;
- Preserve the long-term financial health of the City.

The City has recently implemented a project prioritization tool that is intended to support the capital budget review process. The tool will allow the City to score each project proposed in the capital budget against each other using various criteria that considers legislation, risk management, strategic planning, community benefits, climate change and finance.

5.0 Financial Summary

5.1 Overview

This section of the Plan reviews operating investment needs, growth investment needs, historical revenues, historical capital and operating expenditures, and the lifecycle costs required to provide a level of service over a 10-year period. Unless otherwise noted, the amounts shown are budgeted amounts, not actuals.

Financial projections will be improved as the discussion of proposed levels of service and asset performance matures. Various assumptions were made to determine the lifecycle costs sourced from the City's capital budget and 10-yr forecast due to departmental hierarchy and project costs not fully aligning to the type of asset and lifecycle activities reported in this Plan.

5.2 Review of Historical Revenues and Historical Capital & Operating Expenditures

Figure 5-0 and Table 5-1 provides the average values for the historical three-year operating revenues by type (2022-2024). The values shown are gross revenues as per the approved annual Budget Highlights books.

Table 5-2 shows historical expenditures (2022-2024) for capital and 'other' capital and Table 5-3 shows historical operating expenditures. Operating expenditure includes the costs for maintenance and operation activities for service areas covered in this Plan. The year-over-year increase is primarily due to inflation and additional asset inventory.

Figure 5-0: Three Year Average - Historical Operating Revenue by Type

Table 5-1: Three Year Historical Operating Revenues by Type

Revenues by Type	2022 Approved (\$M)	2023 Approved (\$M)	2024 Approved (\$M)	3-Yr Historical Average (\$M)
Taxation Revenue	\$147.4	\$154.0	\$171.9	\$157.8
Conditional Grants - Provincial	\$60.9	\$77.2	\$86.0	\$74.7
Conditional Grants - Federal	\$0.1	\$0.2	\$0.1	\$0.2
Municipal Grants	\$8.3	\$8.4	\$9.2	\$8.6
COPHI Dividends	\$5.2	\$5.2	\$5.2	\$5.2
Sewer Surcharge	\$18.7	\$19.4	\$20.1	\$19.4
Other Corporate Revenues	\$5.7	\$6.8	\$7.1	\$6.5
Tipping Fees	\$4.5	\$5.0	\$5.6	\$5.0
Transfer from Provincial Gas Tax Reserve	\$1.8	\$1.8	\$1.8	\$1.8
Recoveries from Capital	\$4.5	\$4.2	\$5.6	\$4.8
Payments in-lieu	\$4.2	\$4.2	\$4.3	\$4.2
Transfers from Other Reserves	\$5.7	\$6.4	\$8.9	\$7.0
Casino Revenue	\$2.4	\$3.0	\$3.4	\$2.9
Other Fees and Service Charges	\$28.7	\$31.1	\$33.9	\$31.2
TOTAL	\$297.9	\$326.8	\$363.1	\$329.3

The following Table 5-2 and Table 5-3 provide a breakdown of historical annual expenditures for capital and 'other' capital projects and historical operating expenditures for service areas that are reported in this iteration of the Plan. Values shown in Table 5-4 and Table 5-5 are approved budgeted capital and operating expenditures. The City's Capital Budget is categorized and reported by Department and Division.

Table 5-2: Historical Capital Expenditures for Existing Assets by Lifecycle Activity

Combined Tangible and Other Capital Program Summary	2022 (\$M)	2023 (\$M)	2024 (\$M)	3 Year Average (\$M)
Non-Infrastructure Solutions	\$5.8	\$7.2	\$7.9	\$7.0
Operation and Maintenance Type Activities	\$4.5	\$2.4	\$6.8	\$4.6
Renewal Activities	\$54.4	\$60.0	\$62.5	\$58.9
Disposal/Abandonment Policies	\$0.0	\$0.2	\$0.1	\$0.1
Growth Activities	\$1.4	\$3.8	\$8.8	\$4.7
Service Improvement Activities	\$10.6	\$24.3	\$34.6	\$23.2
Total	\$76.7	\$98.1	\$120.3	\$98.4

Table 5-3: Historical Operating Expenditures

Expenditures	2022 Approved (\$M)	2023 Approved (\$M)	2024 Approved (\$M)
City Council	\$0.7	\$0.8	\$0.9
Chief Administrative Officer	\$20.9	\$1.7	\$3.1
Finance and Corporate Support Services	\$13.7	\$10.8	\$14.1
Legislative Services	\$0.0	\$4.8	\$6.3
Infrastructure, Planning and Growth Management	\$83.0	\$18.5	\$21.4
Municipal Operations	n/a	\$67.3	\$72.1
Community Services	\$102.5	\$141.4	\$154.8
Financial Services Other	\$37.9	\$38.9	\$42.3
Outside Organizations	\$39.2	\$0.0	\$48.1
Total	\$297.9	\$284.3	\$363.1

5.3 Operating Investment Needs – Maintain LOS

The following section outlines the current and forecasted operational lifecycle costs to maintain levels of service for the service areas reported in this plan.

Operating costs include those associated with the day-to-day activities required to provide the service such as general maintenance costs, preventative maintenance costs, energy and utility costs, etc.

Table 5-4 summarizes the estimated operating costs by service area required to deliver levels of service over the 10-yr forecast. Values shown are based on the budgeted values and are indexed 3% over the 10-year horizon.

Table 5-4: Operating Lifecycle Costs

Operating Lifecycle Cost Forecast (\$000)											
Service Area	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033
Roads & Related	\$13,149	\$13,543	\$13,949	\$14,368	\$14,799	\$15,243	\$15,700	\$16,171	\$16,656	\$17,156	\$17,671
Stormwater	\$773	\$796	\$820	\$845	\$870	\$896	\$923	\$951	\$979	\$1,009	\$1,039
Wastewater	\$17,268	\$17,786	\$18,319	\$18,869	\$19,435	\$20,018	\$20,618	\$21,237	\$21,874	\$22,530	\$23,206

Engineering, Construction & Public Works - Pooled Assets - Roads, Wastewater, Storm)	\$3,407	\$3,509	\$3,615	\$3,723	\$3,835	\$3,950	\$4,068	\$4,190	\$4,316	\$4,445	\$4,579
Fleet (all service areas)	\$350	\$361	\$371	\$382	\$394	\$406	\$418	\$430	\$443	\$457	\$470
Underground Services (Pooled Assets - Wastewater, Stormwater)	\$467	\$481	\$495	\$510	\$525	\$541	\$557	\$574	\$591	\$609	\$627
Parks and Forestry (Pooled Assets - Park Amenities, Urban Forest)	\$4,317	\$4,446	\$4,580	\$4,717	\$4,859	\$5,004	\$5,155	\$5,309	\$5,468	\$5,633	\$5,802
Total	\$146,901	\$151,308	\$155,847	\$160,522	\$165,338	\$170,298	\$175,407	\$180,669	\$186,089	\$191,672	\$197,422

5.4 Growth Investment Needs and Projected Funding

Based on the City's adopted Official Plan (April 2023) and the Growth Plan for the Greater Golden Horseshoe, the City of Peterborough's projected residential population will grow from a population of 83,000 in 2016 to 125,000 by 2051. It is anticipated that the employment sector will grow from 45,000 jobs in 2016 to 63,000 jobs by 2051.

Adding to service demands, the City of Peterborough also provides services to the surrounding townships within the County of Peterborough, where many County residents commute to the City of Peterborough for work. The City's population also fluctuates with post-secondary enrolment in Trent University and Fleming College for eight months of the year, as well as servicing the cottage community during the summer months. These factors combined all play a significant role to the service requirements for the City.

To accommodate residential growth, the City has annexed large plots of land, mainly at the north, east and south boundary limits. These annexations have placed further strain on the City's servicing needs where annexed residents are expecting full City service.

In order to recover costs for development-related capital works, the City of Peterborough levies two types of development charges (DC): Planning Area development charges and City-wide uniform development charges. The City needs to continue to levy DCs to help fund capital projects throughout Peterborough so that development continues to be serviced in a fiscally sustainable manner.

Many of the assets in this Plan are captured in the Development Charges (Citywide and Area Specific) study and By-law for growth²³. The By-law is generally based on the findings from Secondary Planning Area Studies, the Transportation Master Plan, and previous Development Charge (DC) By-laws. Consideration shall be given to the City's growth targets provided by the province and applied to the DC study versus achieved growth rates. This alone could have a drastic impact on the overall 'needs' of the Plan. If the City does not meet the proposed growth, the overall need can likely be reduced.

² City of Peterborough & Hemson Consulting Limited, Citywide Development Charges Background Study, (September 6, 2024)

³ City of Peterborough & Hemson Consulting Limited, Planning Area-Specific Development Charges Background Study, (June 2017 as amended May 26, 2022)

Growth Related Capital and Operating Lifecycle Cost Impacts

Table 5-5 illustrates that by 2034, in order to achieve proposed levels of service and accommodate projected increases in demand due to growth, the City will need an additional estimated \$2.8 million per year to fully fund the full lifecycle costs of the new general services assets supported under the proposed DC By-law. By 2052, the calculated annual provision for engineered assets supported under the proposed DC By-law is an estimated additional \$52.3 million per year. The growth-related lifecycle costs shown in Table 5-5 are based on the 2025 to 2034 (general services) and 2025 to 2051 (engineered services) growth horizon and development needs identified in the 2024 DC Study.

Table 5-6 below summarizes the estimated additional net operating costs that the City will experience due to increases related to growth demand. Table 5-6 shows that by 2034, the net operating costs are estimated to increase by \$57.9 million per year for property tax- supported ten-year general services. By 2051, net operating costs will increase by \$10.6 million for engineered services.

Table 5-5: Additional Growth-Related Capital Lifecycle Costs

Additional Capital Lifecycle Costs for Growth Related Demands		
Service Area – General Services	Annual Lifecycle Cost for Growth (by 2035)	
	New Assets	Benefit to Existing
Library Services	\$202,317	\$455,234
Fire Services	\$146,695	\$1,962,678
Police Services	\$0	\$1,377,717
Recreation*	\$807,214	\$483,165
Parks	\$629,375	\$776,804
Public Works	\$1,037,482	\$1,218,389
Parking	\$23,345	\$230,068
Transit	\$202,317	\$455,234
Waste Management	\$0	\$1,377,717
Total	\$2,846,428	\$6,504,055
Service Area – Engineered Services	Annual Lifecycle Cost for Growth (by 2052)	
	New Assets	Benefit to Existing
Services Related to a Highway	\$46,744,115	\$57,347,260
Sewage Services	\$5,517,507	\$1,943,083
Total	\$52,261,622	\$59,290,343

Table 5-6: Operating Cost Impacts Associated with Growth-Related Demands

General Services	Additional Operating Cost at 2034
Library Services	\$1,937,360
Fire Services	\$11,798,160
Police Services	\$33,604,750
Recreation	\$2,590,000
Parks	\$584,050
Transit	\$6,476,000
Solid Waste Management	\$905,000
TOTAL	\$57,895,320
Engineered Services	Additional Operating Cost at 2051
Roads and Related	\$10,583,520
Sewage Services	\$0
TOTAL	\$10,583,520

Growth Related Capital Expenditure and Funding Projections

Table 5-7 below summarizes the estimated projected capital expenditure and projected funding related to forecasted increases in demand due to growth, and to achieve proposed LOS.

For General Services covered in this Plan, gross project costs are an estimated \$420 million with \$144 million of projected funding from grants/subsidies/other recoveries, DC reserves and DC charges. The net cost for the City of Peterborough to fund from non-DC related sources is an estimated \$93 million (post 2034 costs excluded).

For Engineered Services, gross project costs are an estimated \$2.0 billion with \$965 million of projected funding from DC reserves and DC charges. The net cost for the City of Peterborough to fund from non-DC related sources is an estimated \$929 million (post 2051 costs excluded).

Table 5-7: Summary of Growth-Related Projected Capital Expenditure and Funding

General Services	PROJECTED EXPENDITURE		PROJECTED FUNDING				
	Gross Project Cost (2025-2034)	Post 2034	Grants/Subsidies/ Other Recoveries	Total DC Eligible Cost		Replacement/BTE	
				DC Reserves	DC Funded	Net Municipal Cost (2025-2034)	10-Yr Annual Average
Development Related Studies	\$4,055,623	\$0	\$0	\$0	\$3,105,623	\$950,000	\$95,000
Library Services	\$21,725,049	\$10,000,000	\$0	\$0	\$4,626,349	\$7,098,700	\$709,870
Fire Services	\$61,810,800	\$47,541,582	\$0	\$862,753	\$6,526,665	\$6,879,800	\$687,980
Police Services	\$82,209,500	\$45,559,093	\$0	\$222,724	\$3,087,683	\$33,340,000	\$3,334,000
Recreation	\$129,500,000	\$64,523,387	\$0	\$5,155,717	\$35,505,896	\$24,315,000	\$2,431,500
Parks	\$31,655,231	\$7,015,615	\$0	\$1,726,961	\$12,787,155	\$10,125,500	\$1,012,550
Transit	\$78,743,359	\$0	\$47,049,038	\$1,878,925	\$19,758,759	\$10,056,637	\$1,005,664
Solid Waste Management	\$10,176,800	\$8,729,972	\$0	\$139,845	\$1,306,983	\$0	\$0
TOTAL	\$419,876,362	\$183,369,649	\$47,049,038	\$9,986,925	\$86,705,113	\$92,765,637	\$9,276,564
Engineered Services	Gross Project Cost (2025-2051)	Post 2051	Grants/Subsidies/ Other Recoveries	Total DC Eligible Cost		Replacement/BTE	
				DC Reserves	DC Funded	Net Municipal Cost (2025-2051)	10-Yr Annual Average
	Roads and Related	\$1,617,301,413	\$109,301,864	\$0	\$16,133,260	\$678,348,628	\$813,517,661
Sewage Services	\$386,307,210	\$0	\$0	\$0	\$270,565,552	\$115,741,658	\$4,629,666
TOTAL	\$2,003,608,623	\$109,301,864	\$0	\$16,133,260	\$948,914,180	\$929,259,319	\$37,170,373

Table 5-8 below shows the projected average annual expenditure for the combined general services and engineered services over the 10-year forecast (inflated 2% per year). These are the benefit to existing/replacement portion of capital costs that the City will need to fund from non-DC sources. It is estimated that the City will need to fund a total of \$509 million over the next 10 years to accommodate BTE/replacement projected increases due to growth.

Table 5-8: Projected 10-yr Capital Expenditure Forecast to Accommodate Growth Needs

Services	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total 10-Yr Expenditure
General Services	\$9,276,560	\$9,462,091	\$9,651,333	\$9,844,360	\$10,041,247	\$10,242,072	\$10,446,913	\$10,655,852	\$10,868,969	\$11,086,348	\$101,575,744
Engineered Services	\$37,170,376	\$37,913,784	\$38,672,059	\$39,445,500	\$40,234,410	\$41,039,099	\$41,859,881	\$42,697,078	\$43,551,020	\$44,422,040	\$407,005,247
Total Expenditure	\$46,446,936	\$47,375,875	\$48,323,392	\$49,289,860	\$50,275,657	\$51,281,170	\$52,306,794	\$53,352,930	\$54,419,988	\$55,508,388	\$508,580,990

As shown in Table 5-7 and Table 5-8 above, the gross municipal expenditure of the development-related capital program totals \$2.4 billion and can be broken down into General Services and Engineered Services. The DCs for the majority of services are limited by the average level of service provided in Peterborough over the last 15 years (the funding cap). There are deductions made from the net-municipal costs for benefits to existing (BTE) residents, available DC reserves, the limitations of historical service levels (the funding cap), and a recognition that some of these investments will provide benefit beyond the planning horizons (“post-period” benefits). Of the \$2.4 billion gross-municipal costs, \$1.1 billion are funded by DC charges and DC reserves. The benefit to existing shares of \$1.0 billion over the next 25 years (\$509 million over the next 10 years) are required to be funded from non-DC sources (i.e. property taxes, user fees).

The DC background study process and ensuing rates fulfill several ongoing key objectives:

- To ensure growth continues to pay for itself so that burden arising from development related capital costs does not fall on existing residents in the form of higher taxation and user fees
- To provide the appropriate level of DC capital funding for infrastructure required by ongoing development in the City, informed by Council approved service levels and Master Plans
- To ensure that the resulting DC rates are fair and equitable for all stakeholders; and do not act as unnecessary disincentive to growth occurring in the City

Proposed funding for the benefit to existing shares of growth-related capital are committed through the adoption of the development related capital program contained in the 2024 Development Charges Study (Report FCSFS24-023 Development Charges – City-wide), subject to annual reviews through the City’s normal capital budget process.

The City is experiencing significant development pressure and is an appealing location for development. The anticipated development in Peterborough over the forecasted period will increase the demand on all City services, not just those reviewed in the DC study. The City is prudent in implementing DC’s to fund development-related capital projects so that growth continues to be serviced in a fiscally responsible manner.

5.5 Financial Strategy Methodology

The financial strategy was developed by completing an analysis on the City's historical and planned capital budget forecast (2024-2034), and combining that with the City's lifecycle, risk and LoS strategies to develop a 10-year investment forecast. The following sections detail the methodology used to complete this analysis for the financial strategy.

5.5.1 Budget Analysis

The purpose of the budget analysis was to identify the different lifecycle costs for each of the Service and Subservice areas. The projects in the City's approved capital budget were used and categorized by lifecycle activity and asset hierarchy (where information was available). Table 5-9 below shows the definitions of Lifecycle Activities used for the analysis in this Plan.

Table 5-9: Lifecycle Activities

Lifecycle Activity	Definition
Non-Infrastructure Solutions	Actions or policies that can lower costs or extend useful lives. Activities include strategic plans, modelling, demand analysis, etc.
Operations and Maintenance Activities	Costs to deliver the service. Including regularly scheduled inspection and maintenance or more significant repair and activities associated with unexpected events. For this AMP, the Capital Budget was used as the source for operations and maintenance type activity costs.
Renewal Activities (Rehabilitation and Replacement)	Significant repairs designated to extend the life of the asset.
	Activities that are expected to occur once an asset has reached the end of its useful life and renewal/rehab is no longer an option.
Disposals/Abandonment Policies	Activities associated with disposing of an asset once it has reached the end of its useful life or is otherwise no longer needed by the City.
Service Improvement Activities	Planned activities to improve the asset's capacity, quality, and system reliability.
Growth Activities	Planned activities required to extend services to previously unserved areas or expand services to meet growth demands.

Projects in the capital budget forecast that had multiple lifecycle activities were separated to isolate the costs for each year. For example, if a \$1 million project was split 70% growth and 30% renewal then the first row would be categorized as growth and the remaining cost of the project changed to \$700K. An additional row would be added and categorized to renewal with the cost at \$300K. The same process was done for projects with multiple Service, Subservice, or Asset Categories.

5.5.2 Asset Needs Forecasting

Asset needs forecasting combines the lifecycle models, levels of service (LoS) measures, and risk management strategy in a decision support (DSS) model. The model has the ability to forecast either asset performance (condition) or spending needs over a given time horizon. This relationship between performance and spending needs is important to understand the costs associated with achieving various service level requirements. The model allows the City to assess the resulting forecasted performance and related spending over a period of time to support decision making. The following figure illustrates an example of a performance forecast graph.

Figure 5-1: Example Performance (Condition) Forecast Graph

The graph can be interpreted as follows. Each of the bars in the figure represents the condition distribution of a group of assets each year. The condition is distributed over five (5) condition states: Very Good, Good, Fair, Poor and Very Poor. The City's LoS measures are tied to asset conditions through a condition-based measure. As the proportion of assets in Very Poor condition decreases, the City's LoS improves. If this proportion of assets is maintained, then so is the City's LoS.

Each performance forecast figure is paired with a spending graph. The following figure provides an example spending graph.

Figure 5-2: Example Spending Graph

The spending graph illustrates the amount of spending required over time to achieve the given performance state. Each bar on the graph is the amount of spending required in a given year to match that same year's performance (condition) distribution. Also on the graph, represented by the right axis, is a line that indicates the percentage of assets meeting LoS under this given scenario.

The City reviewed scenarios for the cost to deliver proposed levels of service and the cost to achieve 100% established levels of service (a.k.a., Backlog Analysis).

The following subsection describes each scenario:

5.5.3 Forecast Scenarios

Scenario 1: Cost to Deliver Proposed Levels of Service

This scenario represents the cost that would be required to deliver proposed (established as current) levels of service over a 10-year forecast period. This is performed by using the DSS to project the condition of assets over the next ten years and ensuring the percentage of assets not meeting service objectives does not increase or decrease. The scenario was reviewed by subject matter experts to assess the affordability, achievability and appropriateness of the proposed LOS. Forecasted costing for other lifecycle

activities are assumed at the same LOS as the historical 3-year spending from the capital budget.

As discussed in Section 3.0 Levels of Service, the City has established that the historical levels of funding will form the basis for the funding available to deliver proposed levels of service. Understanding the costs to deliver proposed levels of service is a requirement of the July 1, 2025 milestone of O.Reg 588/17.

Scenario 2: Achieve 100% LoS Targets - Backlog Analysis

A second scenario that was completed as part of the asset needs forecasting is the backlog analysis. This scenario utilizes the DSS to derive the cost that would be required for the City to meet 100% of its condition-based LOS targets. It represents the cost to complete all necessary renewal/replacement activities on each asset at the appropriate time. It is referred to as a backlog analysis, since it often identifies a significant financial need in the first year of the analysis (otherwise known as the backlog). This need represents the amount of outstanding asset capital expenditure that is currently required. assess the affordability, achievability and appropriateness of the proposed LOS. Forecasted costing for other lifecycle activities are assumed at the same LOS as the historical 3-year spending from the capital budget.

Note that this scenario is not necessarily intended to represent a practical plan that can be enacted, but rather, it illustrates the theoretical upper limit of asset performance that can be achieved, given an unlimited amount of funding. It may or may not be practical, given available funding and LOS targets that the City may propose to achieve.

5.6 Results

5.6.1 Projected Annual Funding

The summary of the Capital Budget Analysis by lifecycle activity is provided in Table 5-10 below. Costs shown are based on the historical 3-year (2022-2024) annual average from the City's capital budget forecast over the 10-year planning period.

Total costs shown in Table 5-10 below will be assumed as the projected available funding to undertake lifecycle activities at proposed LOS. Operating and maintenance costs shown are based on activities/projects from the capital budget forecast only.

The average funds available to undertake lifecycle activities is an estimated **\$103 million** per year over the next 10 years.

Table 5-10: Summary of Projected Lifecycle Activity Funding

Lifecycle Activity	Projected Annual Funding (\$millions)
Non-Infrastructure Solutions	\$8.2
Operations and Maintenance Activities ⁴	\$4.3
Renewal Activities	\$66.7
Disposals/Abandonment Policies	\$0.2
Growth Activities	\$5.1
Service Improvement Activities	\$18.8
Total	\$103.3

5.6.2 Proposed LOS Lifecycle Activities – Annual Forecasted Needs

The compiled investment needs under this scenario are presented in Table 5-11 below. The analysis focused on identifying the planned lifecycle activity needs over the 10-year capital forecast.

The City may also be experiencing operational and maintenance investment gaps and is working towards quantifying the true cost to deliver LoS from the operational side. The City is working towards refining processes to capture the full lifecycle investment needs for inclusion in future iterations of the Plan.

Growth activity costs shown below are based on the planned capital projects in the City's 10-year forecast.

It is estimated that over the next 10 years, an average of **\$126 million** per year is needed to undertake the lifecycle activities to deliver proposed levels of service.

⁴ Costs classified as operations and maintenance type activities from the Capital Budget only (for all scenarios)

Table 5-11: Summary of Lifecycle Activity Costs – Annual Forecasted Lifecycle Activity Needs – Proposed LOS

Lifecycle Activity	Annual Lifecycle Activity Needs – Proposed LOS (\$millions)
Non-Infrastructure Solutions	\$7.2
Operations and Maintenance Activities	\$1.6
Renewal Activities	\$64.5
Disposals/Abandonment Policies	\$0.1
Growth Activities	\$24.5
Service Improvement Activities	\$28.4
Total	\$126.2

Refinements to lifecycle activity investments will be required as condition assessments are updated, and data accuracy improves. This Plan is a fluid document and will require continual updating to make the best-informed decisions possible.

5.6.3 Backlog Analysis – Annual Backlog Needs

The compiled investment needs under this scenario are presented in Table 5-12 below. In this Plan, the difference between the backlog investment needs and the projected funding is also referred to as the ‘Infrastructure Backlog Financial Shortfall’.

Growth activity costs shown below are based on growth related capital needs from the most recent DC Study (and amendments).

It is estimated that over the next 10 years, an average of **\$219 million** per year would be required to eliminate the infrastructure backlog (address all assets not achieving LOS targets) and to deliver other required lifecycle activities.

The backlog analysis considers all necessary lifecycle activities and costs for all assets at the appropriate time. While this may present a significant up-front investment which the City realistically will not be able to fund in a single year, it represents the cost that would be needed to achieve 100% of the established level of service targets as discussed in Section 3.0 – Levels of Service.

Table 5-12: Summary of Lifecycle Activity Costs – Annual Backlog Needs

Lifecycle Activity	Annual Backlog Investment Needs (\$millions)
Non-Infrastructure Solutions	\$7.2
Operations and Maintenance Activities	\$1.6
Renewal Activities	\$134.9
Disposals/Abandonment Policies	\$0.1
Growth Activities	\$46.4
Service Improvement Activities	\$28.7
Total	\$218.6

5.7 Financial Shortfall - Proposed LOS and Infrastructure Backlog

Public infrastructure is often looked at as the backbone of our economy and quality of life. Unfortunately, years of under investment throughout the country have resulted in years of deferred repairs. Canada is beginning to confront its "infrastructure deficit" but it is not without challenges. Peterborough and most other municipalities struggle with the same infrastructure challenges.

The 'Proposed LOS Shortfall' represents the amount of funding that is unavailable to undertake the planned lifecycle activities required to deliver proposed LOS. The Proposed LOS Shortfall is determined over a 10-year planning period by comparing the average proposed LOS costs to the projected annual funding for lifecycle activities (capital projects) in the City's capital budget.

The "Infrastructure Backlog Financial Shortfall" represents the amount of funding that is unavailable to achieve 100% levels of service targets for existing assets and growth-related demands. The financial shortfall analysis is determined over a 10-year planning period by comparing projected annual funding to the annual backlog needs.

Many assumptions are made when determining financial shortfalls. Currently, the cost of fully implementing the lifecycle strategies identified in this Plan and the cost for delivering levels of service are not fully understood and do not align with the City of Peterborough's budget planning processes. As a result, not all lifecycle strategy costs are accurately presented in the needs analysis. This also creates a somewhat misleading financial shortfall that will be improved as the City's asset management planning matures. Until levels of service are fully understood, it can be assumed that the needs identified in this Plan ensure that assets are (at a minimum) maintained in acceptable condition, funding is available to meet growth demands and regulatory requirements are met. Also incorporated into the analysis are other assumptions such as provincial targets for growth in Peterborough, user rates remaining constant and

Community Housing support continuing with reduced provincial involvement.

5.7.1 Proposed LOS Financial Shortfall Summary

Table 5-13 and Figure 5-3 below summarize the projected funding and proposed LOS costs over the next 10 years. Lifecycle activity dollars and projected budget dollars shown in Table 5-13 below have been indexed by 3% per year to reflect inflationary costs.

The estimated average financial shortfall to deliver Proposed LOS over the next 10 years is **\$26.2 million per year**. This indicates that 82% of the forecasted lifecycle costs needed to provide the proposed services reported in this Plan at the lowest lifecycle cost are accommodated in the projected budget.

Table 5-13: Forecasted Lifecycle Activity Costs - Proposed LOS for All Service Areas

	Forecasted Lifecycle Activity Costs – All Service Areas (\$millions)									
Lifecycle Activity	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034

Funding Gap to Deliver Proposed LOS
Total Needs: \$145M

5.7.2 Infrastructure Backlog Financial Shortfall Summary

Table 5-14 and Figure 5-4 below summarize the projected funding and infrastructure backlog needs over the next 10 years. Lifecycle activity dollars and projected budget dollars shown in Table 5-10 below have been indexed by 3% per year to reflect inflationary costs.

The estimated average financial shortfall over the next 10 years to eliminate the backlog needs and undertake lifecycle activities to deliver proposed LOS is **\$132.1 million per year**. This indicates that 47% of the forecasted lifecycle costs needed to provide the proposed services reported in this Plan at the lowest lifecycle cost are accommodated in the projected budget.

Table 5-14: Forecasted Lifecycle Activity Costs – Infrastructure Backlog Financial Shortfall

	Backlog Lifecycle Activity Costs – All Service Areas (\$millions)									
Lifecycle Activity	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033

Average Annual Needs for Backlog Needs *2024-2033	Projected Funding	Average Financial Shortfall
\$251 million	\$119 million	(\$132 million)

*Value represents annual needs averaged over the projected 10-year planning period

Lifecycle Backlog Needs and Funding Gap
Total Renewal Needs: \$251M

Assets not maintained at proposed LOS are likely to experience a reduction in service levels over the 10-year period. They may potentially experience more frequent asset failures or disruption to services, as well as increased levels of maintenance to keep assets in service. Several possibilities exist to begin minimizing the gap between needs versus projected funding. To overcome this financial challenge, the City must review asset needs comprehensively in view of the services they deliver on an annual basis, or during the budget deliberation process. As unplanned revenues become available, the City will seek to apply them towards mitigating shortfalls whenever possible. The assets included in this Plan have a large impact on delivering the services that Stakeholders expect, and at reasonable costs (taxes, fees etc.). As further information becomes available and is refined, these financial projections will be improved.

5.7.1 Options for the Financial Shortfall

Finding the right balance between service delivery and funding can be a complicated process with pros and cons. For example, strategically prioritizing the City's land development growth areas allows for responsible delivery of services in a fiscally responsible manner but may have an impact on economic growth.

A plan to increase the City financing available for capital works was recommended to council in 2012 and amended in 2021⁵, in which a Debt Management Policy and other changes to assist in capital works were outlined. The report is a result of a full analysis Finance staff undertook to review the City's financial situation, existing debt policy, the options available and consequences of those options.

Of significant importance to capital planning, the following was adopted by Council;

- That the Debt Management Policy will increase the maximum amount of debt the City of Peterborough can issue.
- That the annual draft operating budget includes a 5% increase in the capital levy provision as a means of providing more capital levy to support the capital investment needs.
- A phase-in of the new maximum debt limit, the total annual amount of new tax-supported debt charges and any increase in the base capital levy provision be limited so that the impact on the all-inclusive tax increase does not exceed 1% per year.

In reference to the information in this Plan and as previously reported to council in the Debt Management and Capital Financing Plan, the City will consider a blend of the Debt Management Policy and the approaches outlined below in order to manage the shortfall and achieve service delivery goals:

- Alignment of the City's budget process with the asset management plan.
- Review and prioritize assets in poor to very poor condition.
- Give priority to asset renewal expenditure vs. new build
- Maximize Federal and Provincial funding

⁵ City of Peterborough, Report CPFS12-011 Debt Management and Capital Financing Plan (April 4, 2012) and amended through Report CLSFS21-024 (July 2, 2021)

- Growth area strategies and funding.
- Lifecycle costing prior to new development or renewals to understand future expenditure needs and commitments.
- Expanded partnerships or external funding.
- Revisit disposal strategies.
- Dedicated funding programs.
- Community review of and input on service levels; and
- Procurement methodologies as per the Procurement By-law.

In addition to the approaches listed above, the City recently developed a Capital Project Prioritization Questionnaire in which the discussion on prioritization is initiated by aligning the criteria in which projects are scored against using asset management program initiatives, objectives, and overarching City goals and targets. Factors such as legislative requirements, achieving levels of service, risk, cost benefits and climate change, etc. play a significant role in developing investment plans across the organization. The capital project prioritization process helps position investments with the greatest benefit (considering impact and benefit from a financial aspect and the consequences of not completing it), while balancing an acceptable level of risk.

6.0 Plan Improvement & Monitoring

6.1 Improvement Plan

Asset management is a continuously improving practice that is rapidly being applied across all Municipalities. As the City's asset management practices evolve and matures this Plan will also mature. The City completed a State of Asset Management (SOAM) assessment and an Asset Management Road Map to improve the City's asset management practices for decision making.

6.2 Asset Management Maturity

The SOAM identifies that the City has implemented a continual improvement process for the City's asset management practices based on ISO 55000 for Asset Management. The most recent internal audit completed in 2024 has determined that the City is currently considered to be asset management "Developing" and moving towards "Competent" with an average score of 2.6, with the goal of achieving a minimum average score of 3.0 or 'Competent'(bold circle).

Figure 6.0 below shows where the City scores relative to the AM Maturity 'wheel' and the criteria in which the City was scored against. Asset management maturity audits are anticipated to be completed on a regular cycle where each section shown in the figure below is evaluated and scored for compliance.

Figure 6-0: City of Peterborough State of Asset Management Maturity

Clause No.	Subsection
4.1	Understanding the organization and its context
4.2	Understanding the needs and expectations of stakeholders
4.3	Determining the scope of the asset management system

10.1	Nonconformity and corrective action
10.2	Preventive action
10.3	Continual improvement

7.0 Conclusion

The City strives to effectively deliver services to the expectations of the public while meeting legal obligations. To meet the service expectations the City has developed several strategies in which some are successful in reducing the costs to the City while improving the overall asset condition. Other strategies are either recently approved or have not been documented well enough to fully understand their impact on the overall condition or service delivery.

Beyond the current asset base, the City needs to plan for new assets to meet growth needs. Growth needs are based on planning areas in the Official Plan and are influenced by the Province's Places to Grow Act and the Greater Golden Horseshoe Growth Plan.

Options are available for the City to manage the financial shortfall. The City can continue to deliver services at the current levels and maintain the commitment to fund required investments whenever possible. Possible options are described as follows and are not an exhaustive list:

- 1) As additional revenue sources become available, these can be put towards reducing the shortfall (a.k.a. paying for the gap). However, the capital program needs continue to exceed the available funding on an ongoing basis, leaving the City with no other option but to defer asset renewals to future years. This often results in higher costs over the long-term planning period.
- 2) The second option is reducing service levels to align with the available budget (with the understanding that there are legislated/regulated/essential services that can't be reduced or eliminated). This may be received with hesitation since Stakeholders are often unwilling to give up services being enjoyed and do not fully understand the true cost of delivering them (and the willingness to pay).
- 3) The City can seek to implement more efficient strategies to deliver services such as the sharing of services with other local boards, agencies and municipalities, offering incentives for services, or the provision of alternate services.

The asset management plan will play a significant role in understanding services being delivered, the costs of delivering them and associated risks. The Plan also seeks to help prioritize capital projects and serve as an overarching guided document for decision making processes.

This Plan has had to make several assumptions to come to the conclusions drawn. In making these assumptions, actions are being reviewed to help improve future iterations and reduce the number of assumptions.

Council approved Plans, Policies and Procedures are available on the City's corporate website. Asset specific details relating to the asset management plan can be found in the Service Area Attachments which are also available on the City's website at www.peterborough.ca.

8.0 Appendices

Separately attached

9.0 Service Area Attachments

The service area attachments in this section contain details relating to the topics below and are further analyzed:

- Inventory Details
- Replacement Costs
- Asset Condition and Remaining Useful Life
- Risk Assessment
- Levels of Service
- Asset Management Strategies
